Within the executive summary and the narratives of the rest of this report, figures have been presented in millions of currency units to improve readability. Tables containing figures in the rest of this report are presented in thousands of currency units. Small rounding differences may exist but the numbers included reflect the results presented in the Solvency II Quantitative Reporting Templates.

EXECUTIVE SUMMARY

INTRODUCTION

This document, the Solvency and Financial Condition Report (SFCR) for SCOR Global Life Reinsurance Ireland dac (further referred to as SGLRI or “the Company”), presents information on SGLRI and its solvency position as at December 31, 2020 and has been prepared in accordance with Solvency II regulations. SFCR appendices include key financial information in the standard format of Solvency II public Quantitative Reporting Templates.

The SGLRI SFCR is available at www.scor.com and has also been submitted to the relevant supervisory authorities.

The Solvency and Financial Condition Report includes the following chapters, which are summarized below:

- A. Business and performance
- B. System of governance
- C. Risk profile
- D. Valuation for solvency purposes
- E. Capital management

SCOR SE is the immediate and ultimate parent of SGLRI. SCOR SE is a European Company domiciled in France. SCOR SE, together with its consolidated subsidiaries (referred to collectively as “SCOR” or the “Group”), form the world’s 4th largest reinsurer¹ and is listed on the Euronext Paris regulated market. SGLRI holds an investment in SCOR Life Ireland dac (further referred to as SLI).

Within the executive summary and the narratives of the rest of this report, figures have been presented in millions of currency units to improve readability. Tables containing figures in the rest of this report are presented in thousands of currency units.

References to additional detail included in the following publicly available documents have been made throughout the report:

- SCOR Global Life Reinsurance Ireland dac Directors’ Report and Financial Statements for the Year Ended December 31, 2020 (further referred to as the 2020 Financial Statements) available on the CRO website;
- 2020 Document d’Enregistrement Universel – the Universal Registration Document of SCOR SE, including the consolidated financial statements of SCOR Group and unconsolidated corporate financial statements of SCOR SE (Etats financiers non consolidés de SCOR SE), filed with the French financial markets authority (*Autorité des marchés financiers* – AMF) and available on SCOR’s website www.scor.com/en/financial-results (further referred to as the 2020 Universal Registration Document or the URD).
- Solvency and Financial Condition Report for SCOR Group and SCOR SE as of December 31, 2020 (further referred to as SCOR Group SFCR) and available at www.scor.com/.
- SCOR’s strategic plan, “Quantum Leap” covering the period mid-2019 to end of 2021 available at www.scor.com/en/media/news-press-releases/scor-launches-its-new-strategic-plan-quantum-leap.

SCOR Global Life Reinsurance Ireland dac

Business and performance

SCOR Global Life Reinsurance Ireland dac (SGLRI) underwrites Life reinsurance business in the Americas, EMEA (Europe, Middle East and Africa) and Asia-Pacific in the following product lines:

- Protection;
- Financial Solutions;
- Longevity.

Protection encompasses the traditional life reinsurance business for living and death benefits. The main risks undertaken are mortality, morbidity and behavioral risks for individuals and groups of individuals. Financial solutions typically combine traditional Life reinsurance with financing components providing liquidity, balance sheet, solvency and/or income improvements to the client. Longevity products cover the risk of negative deviation from expected results due to the insured or annuitant living longer than assumed in the pricing of insurance cover provided by insurers or pension funds.

SGLRI in USD millions	December 31, 2020	December 31, 2019
Eligible Own Funds (EOF)	3,687	4,004
Solvency Capital Requirement (SCR)	1,915	1,622
Solvency ratio	193%	247%
Gross written premiums	1,556	1,500

As per regulatory requirements, this report focuses on the developments in the financial year ending on December 31, 2020. In the face of the Covid-19 pandemic, SCOR has once again demonstrated the strength and resilience of its business model as well as its ability to absorb major shocks. The Group consistently continues to execute its strategic plan “Quantum Leap” combining growth, profitability and solvency, with no change in risk appetite, capital shield policy or capital management policy. Please see section A.5 – Any Other Information for further information on the Covid-19 pandemic.

System of governance

SGLRI is a designated activity company incorporated in Ireland, with its registered office located at 6th Floor, 2 Grand Canal Square, Dublin 2 and registered with the Irish Companies Registrations Office under the number 366572. It is authorized and regulated by the Central Bank of Ireland as a composite reinsurance company and is also authorized to operate:

- within the European Union pursuant to the European passporting regulation
- in other countries where operating in reinsurance is not subject to license

The Constitution of SGLRI and the Internal Regulations of the SGLRI Board of Directors set forth the fundamental rules of its governance inter alia the structure, composition and organization of the SGLRI Board of Directors as well as the duties and responsibilities of the directors.

Risk profile

SGLRI regularly conducts reviews of the risks that could have a material adverse effect on its activity, its financial position or results (or capacity to meet objectives) and considers that no significant risk other than those disclosed in the Risk profile chapter of this report exists.

SGLRI has identified the following categories of risk:

- underwriting risks related to the Life reinsurance business, which can arise when the actual amounts of claims and indemnity payments, or the timing thereof, differ from estimates;
- market risks; the risk that the fair value of future cash flows of a financial instrument fluctuates because of changes in market prices or macroeconomic variables;
- credit risks; the risk of incurring a loss as a result of an unexpected change in the financial situation of a counterparty;
- liquidity risks, which can arise when available liquidity is not sufficient to meet liquidity needs;
- operational risks, which are inherent to all businesses;
- strategic risks, which can arise either from the strategy itself, from external risks or from internal risks.

All risks described in the Risk profile chapter are managed through a variety of mechanisms in SGLRI’s Enterprise Risk Management (ERM) framework.

Valuation for solvency purposes

Solvency II requires SGLRI to produce an economic balance sheet (subsequently referred to as EBS) representing a market view of its assets and liabilities as at the reporting date. Solvency II regulations require the EBS to include assets valued at the amount for which they could be exchanged between knowledgeable willing parties in an arm's length transaction and liabilities valued at the amount for which they could be transferred, or settled, between knowledgeable willing parties in an arm's length transaction. In addition, liabilities are not adjusted to take account of the credit standing of the reporting entity.

The details of the valuation principles applied in the EBS, including the differences between the valuation principles and those applied in the financial statements, are outlined in Chapter D – Valuation for solvency purposes of this report.

In the EBS both assets and liabilities relating to in-force business are recognized at market-consistent values which constitutes the valuation for solvency purposes. SGLRI's EBS as at December 31, 2020 has been prepared based on the assumption that the company will continue as a going concern, in line with the preparation of the financial statements. SGLRI prepares its financial statements in accordance with International Financial Reporting Standards (IFRS).

The preparation of the EBS requires management to make certain judgements, assumptions and estimates. These affect the reported amounts of assets and liabilities and the additional disclosures. Management reviews these estimates and assumptions periodically, based on past experience and other factors. The actual outcome and results could differ substantially from estimates and assumptions made. The most material financial statement items for which SGLRI uses estimates and assumptions are technical provisions (best estimate liabilities and risk margin), insurance and reinsurance receivables/payables, liabilities relating to reinsurance operations, the fair value and impairment of financial instruments and deferred taxes.

Capital management

Capital management is at the core of SGLRI's strategy. SGLRI's goal is to manage its capital in order to maximize its profitability, while maintaining solvency, in line with its risk/return strategy.

As a 100% subsidiary of the SCOR Group, SGLRI's capital management governance and processes are in line with those of the SCOR Group.

SCOR developed its internal model to ensure that its solvency is properly measured: the model is part of a comprehensive solvency framework which seeks to ensure that SCOR, including SGLRI, is solvent now and will continue to be solvent in the future. Based on a deep understanding of the risks SCOR faces, the internal model uses state-of-the-art techniques to measure solvency and assess capital requirements, including the SCR.

SCOR applies the same internal model across the Group including SGLRI. Since January 1, 2016, the regulatory solvency position of SGLRI has been assessed using SCOR's internal model, which was approved in November 2015 by the relevant supervisory authorities.

SGLRI considers all its basic own funds, identified in line with Solvency II rules and resulting from economic adjustments made to SGLRI's shareholder's equity under IFRS, as available and eligible to cover the SCR.

A. BUSINESS AND PERFORMANCE

A.1 Business

A.1.1 OVERVIEW

A.1.1.1 NAME AND LEGAL FORM

SCOR Global Life Reinsurance Ireland dac (SGLRI) is a designated activity company.

Registered office of SGLRI and contact information

6th Floor
2 Grand Canal Square
Dublin 2
Ireland
D02 A342
Tel: +353 1 764 4500
Fax: +353 1 764 4509

A.1.1.2 SUPERVISORY AUTHORITIES FOR SGLRI AND SCOR GROUP

SGLRI's regulator is the Central Bank of Ireland (CBI).

The Group's principal regulators in France are the Autorité des Marchés Financiers (AMF), which is the French financial market regulator, and the Autorité de Contrôle Prudentiel et de Résolution (ACPR), which is the French insurance supervisor.

Under Solvency II, supervisors from all EU Member States in which SCOR's subsidiaries are established are involved in the Group's supervision through the College of Supervisors comprising: the ACPR, the CBI and the Prudential Regulation Authority (PRA).

Name of the supervisory authority	Contact details	Entities in scope
Central Bank of Ireland (CBI)	Central Bank of Ireland New Wapping Street North Wall Quay Dublin 1 Ireland	SCOR Global Life Reinsurance Ireland dac SCOR Life Ireland dac
	Autorité de Contrôle Prudentiel et de Résolution 4 Place de Budapest CS 92459 75436 PARIS CEDEX 09	SCOR SE

A.1.1.3 STATUTORY AUDITORS

Statutory Auditors for SGLRI are as follows:

Name	Contact details
KPMG Represented by Hubert Crehan	1 Harbourmaster Place International Financial Services Centre Dublin 1 D01 F6F5 Ireland

A.1.1.4 SIGNIFICANT SHAREHOLDERS

As at December 31, 2020, SCOR SE is the immediate parent company of SGLRI (100% of control and interest). SCOR SE is a European Company domiciled in France.

A.1.1.5 LEGAL AND ORGANIZATIONAL STRUCTURE OF THE GROUP

The Group parent company is SCOR SE, domiciled in France. SCOR SE, together with its consolidated subsidiaries, is listed on the Euronext Paris regulated market. SCOR SE wholly owns its operating subsidiaries (excluding the shares held by directors).

The main operational entities of the two Group's business units are presented in the chart below¹:

The Group is a three engine group driven by SCOR Global Life (Life business unit), SCOR Global P&C (Non-Life business unit) and SCOR Global Investments.

SCOR Global Life, the Group's Life business unit, operates worldwide through the main global reinsurance company (SCOR SE) as well as insurance and reinsurance subsidiaries and branches in the EMEA region, including France, Germany, the UK, Ireland, Italy, Spain, Switzerland, the Netherlands, Sweden, Belgium, South Africa, in the Americas region, including Canada, the US, Latin America and in the Asia-Pacific region, including Australia, New Zealand, China, Hong Kong, Japan, Singapore, Malaysia, South Korea and India

SCOR Global P&C, the Group's Non-Life business unit, operates worldwide through the main global reinsurance company (SCOR SE) as well as insurance and reinsurance subsidiaries and branches in the EMEA region, including Spain, Italy, Switzerland, the UK, Germany, South Africa, Russia, in the America region and in the Asia-Pacific region, including Australia, China, India, South Korea, Hong Kong and Singapore.

SCOR Global Investments, the third business unit of the Group, manages the investment portfolio of the Group's legal entities. It is responsible for defining, implementing and controlling the asset allocation of the Group's legal entities investment portfolios in a centralized manner. It is organized around two areas: the Group's functions and a portfolio management company regulated by the AMF, SCOR Investment Partners SE, which manages directly the assets of many SCOR Group subsidiaries and manages also investment vehicles on behalf of the Group and third- party clients. Please refer to section C.3.2.1 – Risk Management of Assets – An Overview for further details.

SGLRI owns 74% of a subsidiary, SCOR Life Ireland dac, incorporated in and domiciled in Ireland, and regulated by Central Bank of Ireland (see Note 12 – Investment in subsidiary of the 2020 Financial Statements for more information).

¹ The full organizational chart is available on SCOR's website (www.scor.com)

A.1.2 BUSINESS DESCRIPTION

SGLRI underwrites Life Reinsurance from the Americas, EMEA and Asia-Pacific in the following product lines:

- Protection;
- Financial Solutions;
- Longevity.

Protection

Protection encompasses traditional Life Reinsurance business on living and death benefits. The main risks undertaken are mortality, morbidity and behavioral risks for individuals and groups of individuals. Protection is predominantly underwritten in the form of proportional treaties (quota share, surplus basis or a combination of both). Quota share treaties include structures whereby SGLRI's exposure is identical to those of its clients, and risk-based premium structures whereby treaty conditions differ from those of the underlying policies. A minority of the portfolio is underwritten in the form of non-proportional contracts: excess of loss per person, catastrophe excess of loss or stop loss.

The Protection reinsurance market, as well as SGLRI's Protection portfolio, is characterized by the dominance of long-term contractual relationships. SGLRI also writes short-term Protection business in markets and product lines in which this is common practice.

Protection covers the following products and risks in reinsurance arrangements:

Mortality

SGLRI underwrites mortality risk in all the geographical markets in which it operates.

Disability

Disability insurance mitigates the loss of income when the insured is totally or partially unable to continue his or her professional occupation or any occupation for which he or she is suited due to sickness or accident.

Critical Illness

Critical Illness insurance typically pays a lump sum benefit, to be used at the policyholder's discretion, if the insured suffers from a serious condition and survives a defined period.

Medical

Medical insurance covers medical and surgical expenses incurred by the insured person.

Personal Accident

Personal Accident insurance pays a lump sum benefit if the insured person dies or is seriously injured as a result of an accident.

Financial Solutions

Financial Solutions combine traditional Life Reinsurance with financial components providing liquidity, balance sheet, solvency and/or income improvements to the client. This type of reinsurance treaty is typically used by cedents to fund growth, stabilize earnings or optimize their solvency position (capital relief).

Longevity

Longevity products cover the risk of negative deviation from expected results due to the insured or annuitant living longer than assumed in the pricing of the cover provided by insurers or pension funds.

SOLVENCY II LINES OF BUSINESS

In order to align with the lines of business defined under Solvency II (Life and Health), Longevity is classified as purely Life Reinsurance, while the Financial Solutions and Protection businesses include both Life and Health Reinsurance business, depending on the underlying insurance contract and the nature of the insurance risk covered.

Under Solvency II, insurance and reinsurance obligations are analysed by defined lines of business.

The material lines of SGLRI's business are as follows:

- Life Reinsurance;
- Health reinsurance.

For further information on SGLRI's underwriting and performance by Solvency II lines of business, see section A.2 - Underwriting performance.

A.1.3 SIGNIFICANT EVENTS OR OTHER EVENTS

The following significant event occurred during 2020:

- On March 11, 2020, the World Health Organization declared the Covid-19 outbreak a global pandemic. During 2020, SCOR is successfully managing and absorbing the impact of the Covid-19 pandemic both operationally and financially.
- Effective from 1 January 2020 the Company entered into transactions with two SCOR affiliated entities that included the recapture of the affiliate part of the Company's US mortality risk business, please refer to the following note in the 2020 Financial Statements: Note 30 - Portfolio recapture. The Company continues to have US gross third-party mortality risk business on its books.

A.2 Underwriting performance

A.2.1 UNDERWRITING RESULTS BY LINES OF BUSINESS

The tables in this section are presented in line with the 2020 Financial Statements.

SGLRI IFRS in USD thousands	Net underwriting result ¹	
	2020	2019
Health reinsurance	40,880	51,656
Life Reinsurance	(13,618)	127,862
Total	27,261	179,518

¹ Net underwriting result includes the net technical results (net premiums, net claims, net commissions and revenues associated with financial reinsurance contracts) and interests on deposits.

The following comments on underlying business development reflect the management view of the business (Protection, Financial Solutions and Longevity) as aligned with other financial communications of the SCOR Group.

In 2020, SGLRI continued to perform positively in a competitive Life reinsurance market. A portfolio recapture in 2020 resulted in a reduction in net underwriting result. Outside of this recapture and the impact of COVID 19 on claims incurred, the solid operating profitability of SGLRI was maintained thanks to a robust technical performance across product lines.

Gross written premium by product line

Gross written premium has increased from USD 1,500 million in 2019 to USD 1,556 million in 2020.

Protection

Protection business accounts for 86% of total gross written premium in 2020 (2019: 77%) and remains a key driver for premium growth.

SGLRI reinforced its position in key European markets such as the UK. Asia-Pacific remains a region with significant growth opportunities both in terms of premium and profitability. Within the Protection product line, mortality was the main risk underwritten.

Financial Solutions

The Financial Solutions product line, accounted for 14% of gross written premiums in 2020 (2019: 23%).

Technical margin

The 2020 technical margin of 1% (2019: 11%) is calculated as the net technical result expressed as a percentage of net written premium. The decrease over 2019 is primarily due to the change in reserves and portfolio restructure completed in 2020 as outlined above. The 2020 technical margin is impacted by 2% due to Covid 19 claims.

A.2.2 UNDERWRITING RESULTS BY GEOGRAPHICAL AREAS

SGLRI				
As at December 31, 2020				
IFRS in USD thousands	EMEA	Americas	Asia-Pacific	Total
Gross written premiums	569,268	162,623	824,347	1,556,239
Net underwriting result¹	58,372	(63,494)	32,384	27,262

¹ Net underwriting result includes the net technical results (net premiums, net claims, net commissions and revenues associated with financial reinsurance contracts) and interests on deposits.

SGLRI				
As at December 31, 2019				
IFRS in USD thousands	EMEA	Americas	Asia-Pacific	Total
Gross written premiums	537,953	327,557	634,372	1,499,882
Net underwriting result¹	(48,290)	188,526	39,282	179,518

¹ Net underwriting result includes the net technical results (net premiums, net claims, net commissions and revenues associated with financial reinsurance contracts) and interests on deposits.

The tables above shows the breakdown by gross volume of premium written and underwriting performance by geographic area.

In 2020, SGLRI generated approximately 53% of its gross written premium in Asia-Pacific (2019: 42%), 37% of its gross written premium in EMEA (2019: 36%) with significant positions in the UK, Spain and Germany, and 10% of its gross written premium in the Americas (2019: 22%).

A.3 Investment performance

A.3.1 INVESTMENT INCOME AND EXPENSES

Investment income and expenses by asset class

SGLRI		
IFRS in USD thousands	2020	2019
Investment revenues on invested assets - fixed income	28,478	29,819
<i>Investment revenues on fixed income</i>	28,478	29,819
Realized gains/losses on invested assets - fixed income	37	76
<i>Realized gains/losses on fixed income</i>	37	76
Realised gain in equity instrument	-	-
Investment income on invested assets	28,515	29,895
Net interest income on funds withheld and contract deposits	30,673	24,351
Investment management expenses	(661)	(280)
Total net investment income	58,527	53,966
Foreign exchange gains/losses	(3,194)	(7,716)
IFRS investment income net of investment management expenses	55,333	46,250
Change in unrealized gains / (losses) on investments (through equity)	6,731	12,878
Average investment assets	2,358,366	2,381,464
Return on invested assets (ROIA as a %)¹	1.21%	1.26%

¹ Invested income on invested assets expressed as a percentage of average investment assets.

Total investment income net of management expenses stands at USD 55 million as at December 31, 2020:

- Investment income on invested assets at USD 29 million (equivalent to a return of 1.2% as compared to 1.3% in 2019 - see comments below) and investment expenses at USD (0.7) million.
- Net interest income on funds withheld and contract deposits at USD 31 million in 2020, equivalent to a return of 2.7% compared to 2.4% in 2019.
- The foreign exchange impact for the year, net of the impact of hedging, is at USD 3 million (loss). This is mainly the product of the adverse changes in the USD/GBP and USD/EUR exchange rates.

The change in unrealized gains/losses on investment amounts to USD 7 million and is recognized through equity. It relates to the asset revaluation reserves on bonds and equities classified as available for sale and on funds withheld.

Investment income on invested assets

Compared to total investment income as shown in the IFRS income statement, investment income on invested assets, shown above, excludes interest on deposits and foreign exchange gains/losses.

2020 has been a singular year, the spread of the Covid-19 pandemic around the globe led to drastic lockdown measures in most of the developed world. The impact on economic activity has been severe with an unprecedented shock on trade and double-digit impacts on GDPs. A major economic crisis would have spread with skyrocketing corporate default rates and banking system failure. This has not been the case, thanks to governments and monetary authorities having followed a nearly unlimited monetary creation policy in compensating for household revenue decreases and liquidity needs. As a result, budget deficits and central banks' balance sheets have materially increased, with record amounts of asset purchase programs. With all developed countries adopting this strategy, no material disequilibrium has been created.

In Europe the divorce between the United Kingdom and the European Union has been enacted by a very late stage agreement, avoiding a cliff-edge shock. Stronger restrictions on trade and movement of people and goods are expected in 2021.

A Biden administration would be expected to have an accommodative budgetary policy but without the capacity to use aggressive tax increases for the financing.

The support to economies and financial markets has driven positive performance of financial assets, disconnected from the underlying economic situation.

Following asset purchase programs, interest rates continued to decrease. In the United States, the 10-year rates decreased from 1.9% on December 31, 2019 to 0.9% on December 31, 2020. Due to rates being already in negative territory the magnitude of the move was less important in Europe where the 10-year German Bund reached -0.6% on December 31, 2020 versus -0.2% a year before. The Bank of England, whose key rate is at 0.1% on December 31, 2020, has disclosed openly that negative rate policy was to be considered as a potential tool of its monetary policy. In contrast, the US Federal Reserve has reiterated its skepticism due to the negative collateral damage it could imply on the banking system.

Debts issued by most leveraged companies have suffered from high volatility linked to the high uncertainty surrounding future default rates. The different indices representing this sector are ending the year in positive territory with, for example, the US high yield market posting a 7% total return for the year.

Income and expenses

Net investment income for the year ended December 31, 2020 amounted to USD 59 million, compared to USD 54 million for the year ended December 31, 2019. The return on invested assets in 2020 was 1.2% as compared to 1.3% in 2019.

A.3.2 INVESTMENT GAINS AND LOSSES RECOGNISED IN EQUITY

The table below sets out the change in the unrealized gains position on fixed income, funds withheld and contract deposit assets (net of deferred tax) at the end of 2020 and 2019.

SGLRI IFRS in USD thousands	2020	2019	Variance YTD
Fixed income	971	911	60
Funds withheld and contract deposits	5,760	11,967	(6,207)
Total	6,731	12,878	(6,147)

A.3.3 SECURITIZED INVESTMENTS

SGLRI did not hold any securitized investments as at December 31, 2020.

A.4 Performance of other activities

Other expenses (administration, other operating expenses and financing)

Administration and other operating expenses for the Company have remained the same, USD 26 million in 2019 compared to USD 26 million in 2020. Financing expenses have also remained stable, USD 28 million in 2019 compared to USD 27 million in 2020.

For further details on other income and expenses incurred by SGLRI over the reporting period other than income presented above in sections A.2 - Underwriting performance and A.3 - Investment performance, please refer to the

following notes in the 2020 Financial Statements: Note 9 – Administration and other operating expenses and Note 10 – Financing expenses.

A.5 Any other information

GOING CONCERN:

As outlined in the 2020 Financial Statements, the directors have a reasonable expectation that the Company will continue in operational existence for at least twelve months from the date of approval of the financial statements (“the period of assessment. In their assessment the Directors have considered COVID-19 and all currently known elements including: the Company’s capital position and the surplus over its required solvency capital ratio and minimum capital ratio; ORSA’s projected solvency ratio and stress testing; liquidity planning and forecasting together with the equivalent elements of its subsidiary SLI and their impact on the Company. On the basis of the above, the directors have concluded that the Company has no material uncertainties which would cast a significant doubt on its ability to continue as a going concern over the period of assessment.

COVID-19 PANDEMIC UPDATE

The outbreak of the new coronavirus was first reported around end of 2019 and early 2020 and was characterized as a pandemic by the World Health Organization on March 11, 2020. Management continuously monitored the developments and has assessed the impacts of the pandemic on the Company’s financial statements as at December 31, 2020 considering that a high degree of management judgment is required in making accounting assessments.

The full impact of the Covid-19 crisis on the Company’s business and results can still not be accurately assessed at this stage, given the uncertainty related both to the magnitude and duration of the Covid-19 pandemic and to the possible effects of future governmental actions and/or legal developments in this context. This uncertainty follows from the high difficulty in working on sound hypotheses on the impact of this crisis due to the lack of comparable events, the ongoing nature of the pandemic, and its far-reaching impacts on world-wide economies, on the health of the population and on customers and counterparties. These hypotheses include, in particular:

- the duration of the pandemic, its impact on health on the short and long term, the availability and effect of the vaccines;
- the response of government bodies world-wide (including executive, legislative and regulatory);
- potential judicial actions or social influences;
- the coverage and interpretation of SCOR’s contracts under these circumstances;
- the assessment of the net claim estimate and impact of claim mitigation actions.

Therefore, any of the impacts described below should be understood in this context as management judgments and estimates made based on evolving analysis and the wide range of theoretical hypotheses which are still evolving. At this stage, none of the scenarios, assessments, impact analysis or figures can be considered as certain or definitive.

The Company’s financial statements are prepared under the going-concern assumption and include the current assessment of claim costs (USD 32.8 million Covid-19 related claims, net of retrocession and before tax), based on data currently available, information received from cedents to date and the results of models used. The assessment performed as at December 31, 2020 is based on parameters that are still to a great extent estimated, even if taking information known at this stage into account. Clearer information about actual exposure is expected further in 2021.

Key assumptions in determining claims costs include epidemiological assumptions in relation to expected population impacts from Covid-19 and assumptions in relation to how this translates to the (re)insured population.

The pandemic led to increased volatility in financial markets, particularly during the first half of 2020. SCOR did not reclassify financial instruments. Fair value measurement approaches have not been changed.

Many governments around the world have reacted to the economic crises triggered by the pandemic and issued government assistance packages, including tax concessions or rebates. SCOR has assessed potential impacts on reported tax charges and balances under consideration of whether these were substantively enacted and met recognition requirements. Deferred tax assets and liabilities are recorded in applying accounting policies consistently

B.SYSTEM OF GOVERNANCE

B.1 General information on the system of governance

B.1.1 GENERAL GOVERNANCE PRINCIPLES

SGLRI has an objective of adopting best practices with regards to governance because good governance contributes to meeting its strategic objectives and ensuring an appropriate management of risks. The governance of SGLRI, aligned with SCOR SE and of SCOR Group derives from the following objectives:

- compliance with applicable laws in the countries where it operates, and in particular, for SCOR SE, with the French Commercial Code, the French Monetary and Financial Code, the AMF's General Regulation and the French Insurance Code;
- pragmatism, simplicity and operating efficiency, allowing for timely and effective decision-making and cost effectiveness;
- clear allocation of roles and responsibilities, including clear reporting lines and accountability;
- checks and balances;
- fostering of cooperation, internal reporting and communication of information at all relevant levels of the Group;
- robust management and internal control leveraging on the consistent application of policies, guidelines, procedures and tools such as IT systems;
- mobilization of skills and expertise;
- balance between strong governance at Group level involving a global vision and global steering of the business and of risk management, and empowerment of local Boards and management teams, allowing for local specificities to be considered;
- multicentricity, with Group functions being carried out in other geographical locations than Paris to benefit fully from the competencies within various locations;
- efficient flow of information bottom-up and top-down.

B.1.2 LEGAL STRUCTURE AND FUNCTIONAL ORGANIZATION OF SCOR GROUP

Please refer to 2020 Solvency and Financial Condition Report of SCOR Group and SCOR SE, section B.1.2 – Legal structure and functional organization of SCOR Group for further details.

B.1.3 GROUP GOVERNANCE STRUCTURE AT GROUP AND LEGAL ENTITY LEVEL

Please refer to 2020 Solvency and Financial Condition Report of SCOR Group and SCOR SE, section B.1.3 for further details in respect of the governance of the Group and SCOR SE.

B.1.3.1 GOVERNANCE OF SCOR GLOBAL LIFE REINSURANCE IRELAND DAC

Legal form and fundamental rules of governance of SGLRI

SGLRI is a designated activity company incorporated in Ireland, with its registered office located at 6th Floor, 2 Grand Canal Square, Dublin 2 and registered with the Irish Companies Registration Office under the number 366572. It is authorized and regulated by the Central Bank of Ireland (CBI) as a composite reinsurance company and is also authorized to operate:

- within the European Union pursuant to the European passporting regulation
- in other countries where operating in reinsurance is not subject to license

SGLRI is subject to Irish and European Union applicable laws and regulations (including but not limited to the CBI's Corporate Governance Requirements for Insurance Undertakings which sets out minimum statutory requirements on how insurance undertakings should organize governance of their institutions) and is supervised by the CBI.

The Constitution of SGLRI and the Internal Regulations of the SGLRI Board of Directors set forth the fundamental rules of its governance.

Board of Directors and Board committees of SGLRI

Mission of the Board of Directors

The Board of Directors may exercise all the powers vested in it by Irish laws and regulations.

In accordance with Irish law, the main responsibility of the Board of Directors is to determine the guiding principles of SGLRI's business plan and strategy and to monitor their application. With the exception of powers explicitly reserved to its shareholder and within the limits of the corporate purpose, the SGLRI Board addresses any matters related to performance and takes decisions regarding business issues concerning the Company. It designates the CEO and the persons effectively running the Company. Directly, or via its committees, it hears the key function holders for SGLRI at least annually and receives their reports. It takes part in the sound and prudent management of the Company. It is informed by management of the financial position, cash position and commitments of the Company. In accordance with legal provisions, it approves the financial statements, proposes and approves dividends and makes investment and financial policy decisions. It approves the Own Risk and Solvency Assessment (ORSA) report and takes it into account when making decisions likely to have a significant impact on SGLRI. It approves certain policies as well as the SFCR and RSR reports. The Board also carries out the verifications and controls deemed necessary.

Composition of the Board of Directors

Per the Internal Regulations, SGLRI must have a minimum of 5 Directors, with a majority of Non-Executive Directors and at least 2 Independent Non-Executive Directors.

Directors are subject to fit and proper requirements as detailed in section B.2 – Fit and proper requirements and are designated as Pre-Approval Control Functions (PCF) per the CBI's Fitness and Probity Regime. In addition, SGLRI complies with Board composition requirements as set out in the CBI's Corporate Governance Requirements for Insurance Undertakings (CGR) and Irish Company law.

Directors' Duties

Under Irish law Directors are required to comply with applicable law and SGLRI's Constitution. Directors may be held liable for any violations both individually and jointly with the other directors.

Each director has a duty of care to the Company. He or she shall not act in his or her own interest, against SGLRI's interests, and must avoid conflict of interests.

Functioning of the Board of Directors

The convening procedures, the holding of the meetings and other details of SGLRI's Board of Directors operations are set by the applicable laws and regulations, by the Constitution of SGLRI and by its Internal Regulations.

The Board of Directors is responsible for considering the appropriateness of a committee structure and may create any committee(s), whether ad hoc or permanent, assisting the Board of Directors in the preparation and examination of selected matters. The Board of Directors appoints and dismisses the members of such committee(s) as it deems fit.

The operations of the Board are assessed annually.

Chairman of SGLRI Board

The Board of Directors elects a Chairman from among its members and, in line with CGR, the Chairman must be an independent Non-Executive Director or a Group Non-Executive Director.

The Chairman is responsible for organizing and directing the work of the Board of Directors.

SGLRI Board Committees

SGLRI's Board of Directors has established the following committees:

- Audit Committee;
- Risk Committee;
- Business Acceptance Committee; and
- Succession Committee (ad-hoc).

The missions, duties and responsibilities, composition rules and operations of these committees are set out in the Terms of Reference for the respective Committees. In particular:

Audit Committee

The Audit Committee is appointed by the SGLRI Board to assist it in monitoring and overseeing (1) the accounting and financial reporting processes and the audits of the financial statements, (2) the integrity of the financial statements, (3) the internal control framework and (4) the performance of the Company.

Risk Committee

The Risk's Committee's mission is to:

- examine, notably based on the own risk and solvency assessment, the major risks with which SGLRI is confronted, both on the assets and liabilities side, and ensure that tools for monitoring and controlling these risks are in place to the fullest extent possible.

- examine SGLRI's principal underwriting and financial commitments (underwriting, reserving, market, concentration, counterparty, asset-liability management, liquidity and operating risks) as well as relating to the evolution of prudential regulations.

SGLRI Business Acceptance Committee

The Business Acceptance Committee's mission is to assist the Board in monitoring and overseeing (1) business review in line with SGLRI's policy on underwriting risk, (2) approval of deals within limits specified by the Board and (3) the execution of documents.

Executive Management of SGLRI

Chief Executive Officer of SGLRI (CEO)

Responsibility for the general management of SGLRI lies with the CEO, their exercise of such powers and responsibilities is limited to the corporate purpose of SGLRI and is subject to the powers specifically conferred to the Board of Directors as per legal or regulatory provisions or the Constitution of the Company.

The CEO is responsible for defining and implementing SGLRI's long term strategy and objectives in line with the Group strategy. The CEO's leadership role also entails being ultimately responsible for all day-to-day management decisions and for implementing SGLRI's long and short-term plans. The CEO serves as the main link between the SGLRI Board and management of SGLRI. The CEO may also communicate on behalf of SGLRI to its' shareholder, employees, Government authorities, other stakeholders and the public.

A number of management committees have been put in place which facilitate bottom-up reporting, the coordination of the action of all major functions in the entity, the involvement of senior management of SGLRI in significant decisions concerning SGLRI and the preparation of the work of the Board of SGLRI.

Management committees at SGLRI level notably include:

- Investment Risk Committee;
- Operational Risk Committee; and
- Underwriting Risk Committee.

Four-eyes principle

SGLRI applies the "Four Eyes Principle", which specifies that it must be effectively run by at least two persons. The CEO of SGLRI is assisted by the Senior Management Team, comprising of the Chief Financial Officer (CFO) and the Chief Risk Officer (CRO) of the Company.

The "persons effectively running" SCOR including SGLRI, are subject to fit and proper requirements as set out by the Group Fit & Proper policy (see section B.2 – Fit and proper requirements).

There are a number of internal documents including the Reserved Powers of the Board and the Powers of Authority, which sets out the criteria for decision making within SGLRI, as any significant decisions are taken by the Board, Board Committees or Management Committees. In respect of Management Committees, any decision must include approval from a minimum of two of the CEO, the CFO and the CRO.

Key functions

The four key governance functions defined by Solvency II contribute to the implementation of an effective system of governance that provides for sound and prudent management.

These functions are the following:

- Risk Management;
- Compliance;
- Internal Audit;
- Actuarial.

There are nominated key function holders for each of these roles in SGLRI.

Key functions for SGLRI may be outsourced (if only partially) to other entities, as and in accordance with the CBI requirements and the rules laid out in the Group Outsourcing Policy. Refer to section B.7 - Outsourcing for further details.

Roles and Responsibilities

For further information on roles and responsibilities of key functions, please refer to dedicated below sections, in particular section B.3 – Risk management system including the Own Risk and Solvency Assessment (ORSA), section B.4 - Internal control system, section B.5 - Internal audit and section B.6 - Actuarial function.

Freedom from influences

The key function holders carry out their duties in an objective, fair and independent manner. They shall be free from any influence that could impair the performance of their duties.

They operate under the ultimate responsibility of the CEO, through their management lines.

Each of the key function holders designated for SGLRI has a sufficiently high rank in the organization and is in a position to conduct their activities in an independent manner. The standing and the authority of the key function holders in the main respectively relevant management governing bodies allow them to execute their tasks with the level of independence required set forth by the Solvency II regulations. In addition, the key function holders interact with the Board members and with the persons effectively running SGLRI on a regular basis.

Access to the Board

The key function holders meet, at least once a year, with the Board of Directors of SGLRI, or one of its specialized Committees.

Besides, the Board of Directors of SGLRI and its Committees may contact the key function holders at their discretion, upon request from their respective Chairmen.

Designation, fit and proper requirements and notification requirement

SGLRI's key function holders are approved by the Board. They are subject to specific fit and proper requirements which are set out in the Group Fit and Proper Policy (see section B.2 – Fit and proper requirements) and the CBI Fitness and Probity requirements. Upon designation, key function holders are notified to the CBI.

Access to information and records

Key function holders are able to communicate on their own initiative with any staff member and to obtain access to any relevant information to carry out their responsibilities. In the event that key function holders face difficulties in accessing relevant information, they shall refer the issue to the CEO or Chairperson of SGLRI for arbitration.

Interactions with other key function holders

Key function holders shall each interact with one another, especially in order to exchange information relevant to each other's areas of competence.

For further information on these interactions, refer to the respective dedicated sections below, in particular section B.3 – Risk management system including the Own Risk and Solvency Assessment (ORSA), section B.4 - Internal control system and Compliance function, section B.5 - Internal audit and section B.6 - Actuarial function.

B.1.4 MATERIAL CHANGES IN THE GOVERNANCE IN 2020

During 2020, SGLRI did not make material changes to its corporate governance system.

B.1.5 MATERIAL TRANSACTIONS WITH SHAREHOLDERS, PERSONS WHO EXERCISE SIGNIFICANT INFLUENCE OR MEMBERS OF THE AMSB

Material transactions with shareholders

As set out in section A.1.1.4 – Significant shareholders, SCOR SE is the immediate and ultimate parent company of SGLRI (100% of control and interest) as at December 31, 2020. (See section A.1.3 – Significant events or other events for more information).

SGLRI did not pay a dividend to SCOR SE during 2020.

SGLRI has several business relationships with SCOR SE, including:

- Reinsurance transactions made in the ordinary course of business;
- Parental guarantee agreement with SCOR SE, guaranteeing SGLRI's payment obligations under its reinsurance contracts;
- Various outsourcing agreements relating to the provision of services including investment management services.

For more information on transactions with entities within the SCOR group refer to Note 31 in the 2020 Financial Statements.

Material transactions with members of the AMSB (Administrative, Management or Supervisory Body)

SGLRI considers that members of the Board constitute key management personnel, as the Board has responsibility and authority for planning, directing and controlling the activities of SGLRI.

Refer to section B.1.6.1 – Compensation policy of the members of the Board of Directors and B.1.6.3 – Main components of the compensation policy by staff category.

Material transactions with persons who exercise a significant influence

Parties are considered to be related if one party has the ability to directly or indirectly control the other party or exercises significant influence over the other party in making financial or operational decisions.

SGLRI's related parties include:

- Key management personnel, close family members of key management personnel, and all entities which are controlled, significantly influenced by, or for which significant voting power is held by key management personnel or their close family members;
- Associates.

SGLRI has several business relationships with related parties, in addition to those with SCOR SE as noted above. Transactions with such parties are made in the ordinary course of business and on substantially the same terms and conditions including interest rates and collateral as those prevailing at the same time for comparable transactions with other parties.

For more information on transactions with related parties refer to Note 31 in the 2020 Financial Statements.

B.1.6 COMPENSATION POLICY AND PRACTICES REGARDING THE MEMBERS OF THE ADMINISTRATIVE, MANAGEMENT OR SUPERVISORY BODIES AND EMPLOYEES

SGLRI conforms to the Group Compensation Policy

B.1.6.1 COMPENSATION POLICY OF THE MEMBERS OF THE BOARD OF DIRECTORS

The SGLRI Board is composed of an Executive Director, Non-Executive Directors employed by the SCOR Group and Independent Non-Executive Directors.

Independent Non-Executive Directors' (INED's) fees are allocated partly in one fixed sum per annum payable in quarters at the end of each quarter and partly based on the effective presence of the directors at the meetings of the Board of Directors and of its Committees, with an amount paid per Board or per Committee meeting they attend. The members of the SGLRI Board who are employees of the SCOR Group do not receive directors' fees in respect of their directorships.

B.1.6.2 GENERAL PRINCIPLES OF THE GROUP COMPENSATION POLICY

SCOR pursues a human capital policy that is in line with the Group's corporate values, strategic plan and risk appetite. SCOR is committed to:

- maintaining a compensation policy that is fully in line with its controlled risk appetite and discourages taking excessive risks;
- aligning management incentives with shareholder value objective;
- having an innovative compensation policy which meets the long-term horizon that is part of SCOR's internal model;
- motivating and retaining its pool of talent and having a compensation policy aligned to human capital development;
- being fully compliant with the regulations and guidelines defined by the regulators as regards to the compensation policy.

In order to achieve such objectives, SCOR has established a very structured and transparent compensation policy, within an overall framework. It is reviewed and submitted to the Board of Directors for approval at least annually. It was last updated in November 2020.

SCOR has established a "Partners"¹ program. This program which is specific and selective includes information sharing, career development and compensation schemes. There are four main Partner levels: Associate Partners (AP), Global Partners (GP), Senior Global Partners (SGP), and Executive Global Partners (EGP). Partners represent around 25% of the global workforce. The SCOR Group has a formal, carefully designed procedure for appointing and promoting Partners implemented every year during an Executive Committee meeting. Candidates must have consistently demonstrated their skills, leadership and commitment in the past. As at December 31, 2020, the proportions of partners by level across the Group is as follows: EGPs: 2%, SGPs: 7%, GPs: 31%, APs: 60%.

B.1.6.3 MAIN COMPONENTS OF THE COMPENSATION BY STAFF CATEGORY

Overall compensation components

Staff member category	Fixed compensation	Variable compensation in cash	Share-based plans	Pension plan
Chairman and Corporate Executive Officer ⁽¹⁾	X	X	Free shares, Stock options, LTIP ⁽²⁾	X

¹ The Partners are key executives, managers, experts, and high potentials formally identified across the Group. Partners are given specific responsibilities in terms of significant achievements, high impact project management and leadership. Therefore, they benefit from a specific and selective program in terms of information sharing, career development and compensation schemes

Senior management	X	X	Free shares, Stock options, LTIP	X
Partners	X	X	Free shares, Stock options ⁽³⁾ LTIP	X
Non partners	X	X	Free shares	X

(1) As a member of the Group Board of Directors, the Chairman and Corporate Executive Officer receives directors' fees

(2) Long Term Incentive Plan

(3) Only Executive Global Partners and Senior Global Partners are awarded stock options

Depending on the country, employees also benefit from other benefits such as health coverage and profit sharing.

Fixed compensation

As a global Group with three Hubs located in the world's major financial centers, SCOR pays competitive base salaries in order to be a competitive player on the job market and to attract talent. SCOR's compensation is benchmarked against local markets at least every two years.

Base salaries are set according to criteria that consider a variety of factors, such as conditions on the local labor market, education and professional experience before joining SCOR, expertise acquired, and the present position and responsibilities of the employee.

SCOR reviews base salaries on a yearly basis to reward individual performance as well as when new responsibilities are taken on by the job holder. An inflation adjustment is not applied automatically as a general rule and is only granted in the few countries where legally required.

Variable cash compensation

Partners

The Partners' cash bonuses are computed on the basis of a percentage of the reference salary. This total percentage ranges from 20% to 100% and increases with seniority in the partnership level. The percentage has two components. The main component (except for EGP's bonuses for whom the individual and collective components are split equally) is directly linked to the individual performance rating. The pay out with respect to each component is subject to meeting certain requirements. The payout on the individual component can range from zero (insufficient performance) to 150% (exceeds expectations rating). The second component is collective and based on the return on equity (ROE) achieved by SCOR in the previous financial year. The payout on the collective component can range from zero (ROE below 30% of the target) to 130% (ROE equal to or above 130% of the target).

The weighting of the individual and collective components is set to better reward the achievement of individual goals at Associate, Global and Senior Global Partner level. Partners can also benefit from an exceptional contribution bonus (ECB) ranging from 0% to 50% of the individual portion of the bonus awarded as a result of a strong contribution to the success of strategic projects or to key strategic achievements.

Other employees

For employees who are not Partners, the SCOR cash bonus rewards individual performance over the previous year. The bonus varies between 0% and 12% of the annual base salary depending on the rating received in the individual appraisal by the employee's direct superior.

Non Partners are also eligible to the exceptional contribution bonus, ranging from 0% to a maximum of 6% of the annual reference salary.

Share-based compensation

SCOR launched the free shares and stock options program in 2004 as a means to encourage the retention of, and strengthen the bond with, executives, managers and talented employees.

Shares and options can only be granted if the Annual General Meeting of the Shareholders approves the resolutions to this effect presented by the Board of Directors.

By delegation of the Annual General Meeting of Shareholders, the Board of Directors determines the allocation of shares and stock options to key personnel within SCOR.

In 2011 the Board of Directors decided to implement a new compensation scheme (Long Term Incentive Plan, (LTIP)) for selected managers and executives of the Group in order to:

- Ensure retention of its key employees while extending the horizon of performance measurement;
- Involve and associate SCOR's key employees in the Group's long-term development.

Partners

The allocation of free shares and stock options to Partners is primarily designed to retain and create loyalty amongst key Group employees. An allocation will not necessarily occur every year and not every Partner is guaranteed an allocation.

The vesting of the shares and options is subject to the satisfaction of presence conditions (3 years to 6 years depending of the nature of the plan) and performance conditions fully aligned with the objectives of the strategic plan (ROE and Solvency ratio). Moreover, beneficiaries must fully respect the Group's Code of Conduct (clawback policy).

Other employees

Free shares may be granted to employees that are not Partners under collective plans that do not include any performance conditions. In addition, under specific circumstances, performance shares can also be granted individually to certain employees who are not Partners.

Pension Plans

While respecting national differences, SCOR offers attractive pension plans to its employees that also cover accident and disability in certain countries.

Although SCOR pension plans are not aligned globally, they are set up to meet local needs and legal requirements. They are calibrated in such a way as to allow for attractive total compensation packages.

Generally, SCOR uses defined contribution pension plans.

B.2 Fit and proper requirements

The Fit and Proper standards of the SCOR Group are embedded in the SCOR Group Fit and Proper policy and the local addendum for SGLRI which sets out the requirements in relation to the Central Bank of Ireland's (CBI) Fitness and Probity Regime (F&P). These standards consist of Fit and Proper principles, and criteria to be used to assess whether a person could be considered as fit and proper. The policy also includes an assessment process to be complied with. These elements are further detailed below. SGLRI will not permit an individual to perform a Pre-Approval Control Function (PCF) and/or Control Function unless it is satisfied on reasonable grounds that the individual complies with the F&P Standards and has obtained confirmation that the individual has agreed to abide by those standards.

B.2.1 OBJECTIVES AND GENERAL PRINCIPLES

SGLRI commits to high "Fit and Proper" standards.

Standards are adapted to the category of work performed by each individual.

A person is considered as Fit and Proper when he or she fulfils the following requirements at all times:

- his or her educational background, qualifications and professional experience are adequate to enable sound and prudent management (fitness) and;
- he or she is of good repute and integrity (propriety). SGLRI assumes that an individual is proper if there is no obvious evidence suggesting otherwise. Some criminal, civil or disciplinary sanctions are antagonistic with meeting propriety requirements, with no possible remediation. Such sanctions can occur both in an individual's private life and professional activities.

Fit and proper standards must be met at all times. Triggering events may require interim reassessments between annual evaluations.

B.2.2 SCOPE OF SCOR'S FIT AND PROPER PRINCIPLES

Standards are adapted to the work performed by each individual. Fit and Proper standards are defined hereinafter for the following categories:

- Category A: Board members (hereafter directors), including the CEO. This category also includes "persons effectively running the company" under the Solvency II Directive;
- Category B: Key Function Holders (actuarial, internal audit, risk management and compliance) under the Solvency II Directive;
- Category C: Board Members and employees within the scope of the European Insurance Distribution Directive (as transposed into Irish law) (IDD); (employees of insurance and reinsurance undertakings who are located in the EU and directly involved in insurance or reinsurance distribution activities in relation to risks and commitments within the European Union, as well as persons within the management structure responsible for insurance or reinsurance distribution);
- Category D: Board members or other employees of SCOR entities operating in jurisdictions not subject to Solvency II where local fit and proper requirements apply to them.
- Category E: Other staff.

Fit and Proper standards apply to each individual for the tasks assigned to them.

Fitness standards for Board members are assessed collectively: in particular, the SGLRI Board is deemed to be fit if, for each subject matter, at least one member is individually fit.

B.2.3 FITNESS CRITERIA

SGLRI considers that fitness is an appropriate mix of:

- relevant educational background and qualifications;
- relevant knowledge and professional experience.

B.2.3.1 EDUCATIONAL BACKGROUND AND QUALIFICATIONS

Although a high quality educational background is desired, professional experience may in some cases compensate for education gained in fields irrelevant to SCOR's activities. However, specific requirements may apply for selected individuals.

SCOR expects individuals to hold the following qualifications:

Applicable to	Qualification requirements
Category A (directors, Chief Executive Officer and "persons effectively running the company")	<p>Master's degree or equivalent which relates at least to one of the following areas:</p> <ul style="list-style-type: none"> ■ strategy or business management; ■ finance; ■ risk management; ■ actuarial science; ■ engineering; ■ economics; ■ law. <p>If an individual does not meet the above criteria, further consideration will be given to the individual's professional experience (see below).</p>
Category B (key function holders)	<p>Master's degree or equivalent.</p> <p>If the diploma is not related to his/her field of professional activity, further consideration will be given to his/her professional experience (see below).</p> <p>The actuarial function holder, shall have appropriate formal actuarial qualifications and be a Fellow or Accredited Member of a recognized actuarial professional body.</p>
Category C (Employees in the IDD scope)	<p>Qualification criteria are defined in the job profiles.</p>
Category D (Board members or employees of SCOR entities operating in jurisdictions not subject to Solvency II where local fit and proper requirements apply to them)	<p>Qualification criteria are defined by the local regulations.</p>
Category E (other staff)	<p>Qualification criteria are defined in the job profiles.</p>

B.2.3.2 PROFESSIONAL EXPERIENCE

Professional experience in a field directly relevant to SCOR's activities or to the tasks assigned to the individuals is key.

SGLRI's directors, CEO and "other persons effectively running the company" are expected to have long-standing experience in their respective fields. When assessing the prior experience of an individual, consideration is given to such criteria: length of the former service, nature and complexity of the business where the position was held, former decision-making powers, responsibilities and number of subordinates.

Each individual must demonstrate:

Applicable to	Qualification requirements
Category A (directors, Chief Executive Officer and “persons effectively running the company”)	<p>Board members:</p> <ul style="list-style-type: none"> ■ recently acquired relevant experience (within the last five years); ■ at least one member must have relevant knowledge and professional experience in each of the following fields: <ul style="list-style-type: none"> - understanding of (re)insurance markets; - (re)insurance company strategy and business model; - financial markets; - regulatory framework; - financial analysis; - actuarial; - risk management; - governance; - accounting; <p>The CEO and “other persons effectively running the company”:</p> <ul style="list-style-type: none"> ■ recently acquired five or more-year long relevant experience (within the last five years): <ul style="list-style-type: none"> - in an insurance or reinsurance company or; - in a field directly relevant to his/her field of responsibility.
Category B (key function holders)	<ul style="list-style-type: none"> ■ A recently acquired relevant experience (within the last five years) ■ the Actuarial key function holder shall have appropriate actuarial experience with an insurance or reinsurance company: ■ the Risk Management key function holder shall have appropriate experience of risk management in the financial industry; ■ the Compliance key function holder and the Internal Audit key function holder shall have appropriate experience in their field of responsibility (Audit, Finance, Law & Compliance, Underwriting, claims handling, etc.).
Category C (Employees in the IDD scope)	<ul style="list-style-type: none"> ■ Professional experience criteria are defined in job profiles ■ Minimum of 15 hours per year of continuous professional training and development.
Category D (Board members or employees of SCOR entities operating in jurisdictions not subject to Solvency II where local fit and proper requirements apply to them)	<ul style="list-style-type: none"> ■ Professional experience criteria are defined by the local regulations
Category E (other staff)	Professional experience criteria are defined in the job profiles depending on the position.

B.2.4 PROPRIETY CRITERIA

B.2.4.1 PROPRIETY ASSUMPTION

An individual may be considered as of good repute and integrity if there is no obvious evidence to suggest otherwise. SGLRI ensures, using the tools described in section B.2.5 – Fit and proper assessment process, that there is no evidence of offences that can adversely affect the good repute and integrity of this person. If evidence is gained of past behaviors casting doubt on an individual’s good repute and integrity, remediation actions shall be taken as appropriate.

SGLRI also takes actions to prevent conflicts of interest.

Proper considerations are relevant for all employees of an undertaking. However, any assessment needs to take into account their level of responsibility within the undertaking and will differ proportionately, according to whether or not, for example, they are “persons effectively running the company” or have other key functions.

B.2.4.2 REMEDIATION

Some criminal, civil or disciplinary sanctions will preclude an individual from meeting propriety requirements (e.g. disciplinary penalties by supervisory authorities, non-petty criminal or civil penalties related to gross misconduct in the management of a company, commercial or professional activities, or related to his/her personal management such as money laundering, market manipulation, insider dealing and usury, any offences of dishonesty such as fraud or financial crime). Others may not.

If an individual is subject to pending legal proceedings that may eventually lead to such penalties, he/she must inform SGLRI.

Circumstances other than court decisions and ongoing judicial proceedings, which may cast doubt on the repute and integrity of the person, may also be considered (current investigations or enforcement actions, imposition of administrative sanctions for non-compliance with provisions governing banking, financial, securities or insurance activity, securities markets, securities or payment instruments).

The following factors are taken into account to waive an impropriety ban: the seriousness of, and circumstances surrounding the offence, the explanation presented by the individual, the relevance of the offence to the proposed role, the passage of time since the offence was committed and evidence of the individual’s rehabilitation, the level of appeal (definitive vs. non-definitive convictions) and the person’s subsequent conduct.

B.2.4.3 TIME AVAILABILITY

Time availability must also be ensured: individuals holding concurrently several responsibilities/roles must have appropriate time to dedicate to the functions under the scope of SCOR’s Fit and Proper policy.

B.2.5 FIT AND PROPER ASSESSMENT PROCESS

The assessment process shall allow SGLRI to ensure that persons/bodies subject to Fit and Proper requirements fulfil the above criteria both before and after their appointment to the position under the scope of the Fit and Proper policy.

The main stakeholders of the initial assessment process are listed below:

Applicant to	Assessor
Board / CEO / Other “persons effectively running the company”	<ul style="list-style-type: none"> Board and CEO; Based on a proposal made by the Head of Corporate and Regulatory Affairs with the support of Human Resources for applicants who are also SCOR employees.
Key function holders	<ul style="list-style-type: none"> CEO; Based on a proposal made by Human Resources.
Employees	<ul style="list-style-type: none"> Direct Managers. Based on a proposal made by Human Resources

According to the applicant level, the identified assessors are in charge of:

- collecting supporting documents about the applicant (e.g. CV), including the fit and proper assessment form;
- deciding if the applicant complies with the “fit and proper” requirements.

Each year, the Corporate and Regulatory Affairs Team/HR department/Direct Managers update their information with an annual fit and proper questionnaire collected from directors, CEO, other “persons effectively running the company”, key function holders, Pre-Approval Control Function/Control Function role holders and employees within the scope of IDD.

Furthermore, when the Corporate and Regulatory Affairs Team/HR department receives notification of any changes affecting an individual’s propriety, it updates the latest assessment.

Some specific situations trigger a re-assessment of the fitness and propriety of a person: reasons to believe that a person will impede the undertaking from pursuing the business in a way that is consistent with applicable legislation, reasons to believe that a person will increase the risk of financial crime, e.g. money laundering or financing of terrorism, reasons to believe that sound and prudent management of the business of the undertaking is at risk.

B.3 Risk management system including the Own Risk and Solvency Assessment (ORSA)

The risk management principles, mechanisms and processes, described hereafter, are defined for SGLRI, in line with the proportionality principle, and are consistent with the approach adopted by SCOR Group.

SGLRI's risk management system is composed of two interconnected parts:

- The risk appetite framework, including risk appetite, risk preferences and risk tolerances;
- The Enterprise Risk Management (ERM) framework composed of various risk management mechanisms which help to ensure that the risk profile is dynamically optimized while remaining aligned with the risk appetite framework.

B.3.1 RISK APPETITE FRAMEWORK

The risk appetite framework is an integral part of the Group's strategic plan. SGLRI's risk appetite is approved by the Board of Directors and considers the Group's strategic plan.

SGLRI's risk appetite framework encompasses the concepts of risk appetite, risk preferences and risk tolerances.

B.3.1.1 RISK APPETITE

Risk appetite defines the quantity of risk that SGLRI wishes to accept to achieve a desired level of profitability. This determines where SGLRI wishes to position itself on the assumed risk-expected return spectrum, between extreme risk aversion (low risk-low return) and extreme risk taking (high risk-high return). SGLRI uses a comfort solvency ratio as well as a target expected profitability. This then provides a comprehensive definition of its risk appetite, with such metrics being regularly reported to the Board of Directors via the Risk Committee.

B.3.1.2 RISK PREFERENCES

Risk preferences are qualitative descriptions of the risks which SGLRI is willing to accept. Based on SGLRI's risk appetite, which considers the Quantum Leap strategic plan launched in 2019, SGLRI pursues an approach of thorough risk selection to optimize its risk profile and aims to:

- actively seek risks related to reinsurance and selected primary insurance
- assume a moderate level of interest rate risk, credit risk, FX and other market risks
- minimize its own operational and reputational risks
- minimize underwriting of cedent's asset-related risks.

B.3.1.3 RISK TOLERANCES

The risk tolerances define the limits set out in order to ensure that SGLRI's risk profile remains aligned with its risk appetite framework. The Board of Directors defines and approves risk tolerance limits for SGLRI by specific risk drivers and asset exposure in order to ensure that SGLRI's risk profile remains aligned with its risk appetite framework. SGLRI uses various risk assessment measures to verify that its exposures remain within these limits. These measures can take several forms depending on the technical constraints or the level of information available and are based on either internal model outputs, scenarios or expert opinions.

For further information on specific risk management strategies, processes and reporting on each risk category, refer to Chapter C – Risk profile.

B.3.2 ERM FRAMEWORK

The Risk Management area relies on an ERM framework with various risk management mechanisms as described in the following sections.

B.3.2.1 INTERNAL ENVIRONMENT

The main tasks of the Risk Management team are to further develop the Enterprise Risk Management framework and promote an ERM culture within SGLRI so that risks are managed consistently within each department.

The Risk Management team is supported in these tasks by the departments in charge of risk management at Group, SCOR SE and SCOR Global Investments. Dedicated departments from within the Risk Management area facilitate the definition and monitoring of the internal environment and the governance of risk management. The Risk Governance and Risk Coverage departments' primary focus is to develop and manage ERM mechanisms and to promote ERM concepts throughout the Group, in addition to providing risk management challenge and support for reinsurance underwriting and asset management.

Compliance with local regulations and constraints is ensured by the Corporate and Regulatory Affairs team.

SGLRI's business standards and practices are governed by its policies and underlying guidelines. SGLRI policies are approved by the executive risk committees and for relevant topics are submitted on a regular basis to the relevant committees of the Board and, ultimately, to the Board of Directors of SGLRI. These policies are not intended to enumerate all the rules governing SGLRI's activities, but rather to establish certain principles intended to ensure that SGLRI and employees share a common understanding of SGLRI's standards and that they work in compliance with these standards. When approved, these documents are made available to employees on the SGLRI network. Refer to Section B.1 – General information on the system of governance for further details on SGLRI's organization and governance structure.

B.3.2.2 SETTING OF OBJECTIVES

The strategic plan "Quantum Leap" sets out the Group risk appetite framework, from which SGLRI's strategy stems, namely to support the strategy of its ultimate shareholder which is SCOR Group, subject to satisfying all local laws and regulatory requirements.

B.3.2.3 IDENTIFICATION AND ASSESSMENT OF RISKS

Different techniques for identifying and assessing risks have been implemented to analyse risk from different angles and to deal with them in an exhaustive manner. They include:

- a risk information process: regular and comprehensive risk reporting is provided to the SGLRI Risk Committee and Board. This includes a quarterly "SGLRI Risk Dashboard" which describes and assesses the major risks SGLRI is exposed to and assembles various risk assessments from different identification and assessment processes for all risk categories;
- a process for the monitoring of risk exposures compared to risk tolerances, i.e. the limits established in order to ensure that SGLRI's risk profile remains aligned with the risk level validated by the Board of Directors. SGLRI uses various risk measures to define these exposures, which are measured based on either model outputs and/or expert opinions, depending on the technical constraints and the level of information available. These include:
 - the 'risk driver' system that enables SGLRI to manage the annual aggregate exposure to each major risk. The objective is to avoid overconcentration of risk and hence maximize diversification benefits. The amount of post-tax retained annual exposure per main risk driver (with a probability of 1 in 200 years) is limited to a maximum monetary amount.
 - sub limits for invested assets;
 - limits per risk which are set in the underwriting and investment guidelines.
- an Emerging Risks process: which is part of SCOR's ERM Framework and relevant results are presented on an ad-hoc basis to the SGLRI Risk Committee. Potential emerging risks are identified and individual risk assessments are carried out by experts from the business units and the Group functions. Significant emerging risks are then reported to the Risk Committee. SCOR, as a member of the CRO Forum, also actively participates and contributes to the CRO Forum Emerging Risks Initiative (ERI) alongside other major insurers and reinsurers;
- certain risks related to climate change are assessed via the Emerging Risks process. The scientific consensus is that human-induced increases in global temperatures are impacting human and natural systems, including through alterations in the frequency and/ or severity of extreme weather events, although the long-term impacts on underwriting activities are difficult to estimate. SGLRI's asset portfolio may equally be exposed to potential physical and transition risks over the longer term. Additionally, as part of its Corporate Social Responsibility program, SCOR is gradually implementing a set of low-Carbon initiatives in an effort to limit anthropogenic carbon emissions. These initiatives are further described in Appendix D of the Universal Registration Document;
- SGLRI's ORSA (Own Risk Solvency Assessment), which provides SGLRI's Board and management with forward-looking information on the respective risk and capital positions of SGLRI. SGLRI's ORSA is completed as part of the Group ORSA process;
- SCOR's internal model, which is deeply embedded in SCOR's risk management system and contributes to the assessment of risks. SGLRI uses the internal model for determining economic capital. Its results are used to implement SGLRI's underwriting and asset management policies and guidelines.

Where relevant, the analysis from these processes are reported to the Risk Committee and to the Board of Directors on a regular basis.

B.3.2.4 MAIN CONTROL ACTIVITIES

Because of its activities, SGLRI is exposed to many risks: reinsurance related risks, market risks and other risks (e.g. liquidity, rating). These risks are detailed in Chapter C – Risk profile. These activities rely on the control mechanisms including adequate reporting mechanisms to the main governance bodies throughout SGLRI.

This section does not detail these risks, but aims to summarize the principal activities and participants of risk control for the following important areas:

- risk management function;
- activities related to reinsurance;
- asset management;
- accounting management.

The control activities described below are considered as the principal activities for controlling risks specific to those areas.

B.3.2.5 RISK MANAGEMENT FUNCTION

The Risk Management area comprises the risk management function and collaborates with the Corporate and Regulatory Affairs department. Further information is presented below;

- the Risk Management function's primary focus is to develop and manage ERM mechanisms promote ERM concepts throughout SGLRI and perform a second-level control over reinsurance underwriting;
- the Corporate and Regulatory Affairs Department monitors Irish prudential regulations and advises SGLRI accordingly. It coordinates SGLRI's actions to comply with regulatory requirements for the supervision of (re)insurance companies in Ireland and SGLRI's interactions with the Central Bank of Ireland (CBI). It also coordinates SGLRI's efforts to adapt to new major prudential regulations, such as Solvency II.

All functions across SGLRI are responsible for contributing to an effective risk management system, which is overseen by the Risk Management function.

B.3.2.6 ACTIVITIES RELATED TO REINSURANCE

The operating and control procedures concerning underwriting, pricing, administration of reinsurance contracts and claims management are validated by SGLRI.

For further information on how the main underwriting risks relate to Life reinsurance business are managed, please refer to Section C.2 - Underwriting risks.

B.3.2.7 ASSET MANAGEMENT

The Prudent Person Principle requires that the security, quality, liquidity and profitability of the portfolio as a whole be considered. This is enabled through the investment governance, strategy, operational framework and reporting and monitoring processes that SGLRI implements.

Governance and principles

SGLRI has harmonized the principles governing the management of its assets: the Policy on Invested Assets defines SGLRI's governance in terms of asset management and the Investment Guidelines determine the limits for concentration risk as well as limits of exposure to different asset classes. The Investment Guidelines thus determine the conditions under which SCOR Global Investments will implement SGLRI's investment policy as defined by the SGLRI Board. The SGLRI Investment Committee meets at least once every quarter. Its role is to supervise the implementation of the investment strategy with regard to the regulatory and contractual constraints and to monitor the compliance of the portfolios positioning with the SGLRI investment guidelines.

For more on liquidity see Section C.5 – Liquidity risks.

Investment strategy

The investment strategy at SGLRI is risk based and the portfolio's positioning is derived from the risk appetite allocated to invested assets as well as the SGLRI risk tolerance, which is aligned with the SCOR Group.

The primary investment objective of SGLRI is to generate recurring financial income in accordance with the risk appetite framework of SGLRI, and to ensure that SGLRI:

- is able to meet its claims and expense payment obligations at all times, and
- creates value for its parent, to support the objectives set out in the strategic plan,

while,

- preserving the liquidity and level of solvency,
- protecting the capital,
- allowing SGLRI to operate on a day-to-day basis as well as over the long term,
- complying with the investment regulations, risk appetites and regulatory capital requirements (level of capital and type of admissible assets), and investment guidelines;
- being committed to Environmental, Social and Governance (ESG) investing, for which SGLRI prioritises investments that have a positive sustainability impact.

Operational framework

SGLRI outsources the investment and reinvestment of all of their invested assets to SCOR SE. This relationship is put in place through an Investment Management Agreement (IMA) which includes local investment guidelines. SCOR SE delegates to SCOR Investment Partners the implementation of the investment strategy for its invested assets. This relationship is put in place through a Master Investment Management Agreement (MIMA) which includes the list of invested asset portfolios for SGLRI and its investment guidelines.

Reporting and risk monitoring

The Group Investment Office (GIO) monitors, on an ex ante and ex post basis, the compliance of the portfolio positioning with regard to SGLRI's risk appetite and investment guidelines. This is then reviewed by the Investment Risk Committee. The GIO is also in charge of reporting processes related to invested assets. The GIO provides SGLRI with regular reports used for the monitoring of the asset portfolios. Breaches are escalated to the Investment Risk Committee. Investments falling outside of the scope of the Investment Guidelines are subject to special referral procedures managed by the Investment Risk Committee.

B.3.2.8 ACCOUNTING MANAGEMENT

The Solvency II reporting process is built upon the Group-wide IFRS reporting process and ensures quality and consistency of SGLRI and Group solvency reporting. It therefore benefits from controls over the accounting and consolidation process.

B.3.2.9 INFORMATION AND COMMUNICATION

For the published Solvency and Financial Condition Report, a specific process has been implemented to coordinate the contribution of all relevant functions and the consistency of the information provided. A final review is performed by Management and the Board of Directors.

B.3.2.10 MONITORING OF THE INTERNAL CONTROL AND RISK MANAGEMENT SYSTEMS

The monitoring of the internal control and risk management systems is ensured by a number of complementary mechanisms within SGLRI.

SGLRI implements dedicated processes and tools to identify, assess and monitor its risk exposure on a regular basis. See Section B.3.2.3 - Identification and assessment of risks.

For more information on the Internal control system see Section B.4.1 – Internal control system.

In addition, and in accordance with its risk-based audit plan and through its periodic assignment, Group Internal Audit provides independent and objective assessments on the adequacy, effectiveness and efficiency of the internal control system in SGLRI. Any findings and risks lead to recommendations and management remediation actions, which are followed up by Group Internal Audit. When Group Internal Audit concludes that management has accepted a level of risk that may be unacceptable to the organization, it must discuss the matter with the relevant management committee in SGLRI. If the Head of Group Internal Audit determines that the matter has not been resolved, he/she must communicate the matter to the Audit Committee.

For more information, refer to Section B.5 – Internal audit.

B.3.3 INTERNAL MODEL CONTRIBUTION TO THE ERM FRAMEWORK

The regulatory authorities require that insurance and reinsurance companies determine the Solvency Capital Requirement using a standard formula. Subject to regulatory approval an internal model can be used for this purpose. SCOR has used its experience and knowledge to develop an internal model which accurately reflects SCOR's risk profile as a global reinsurer. For more detail on the internal model and how it differs from the standard formula, please refer to Section E.4.4 - Key differences between the standard formula and the internal model.

The risk categories reported out of the internal model include Life & Health underwriting and reserving risk, market risk, currency risk, credit risk, interest rate risk and operational risk.

For further information on risks included in SCOR's internal model, refer to Chapter E – Capital Management.

SGLRI is exposed to other risks not modelled within the internal model including strategic, liquidity and emerging risks. These risks are not expected to have an immediate impact on the Solvency Ratio and are monitored and managed through specific processes.

B.3.3.1 ROLE OF THE INTERNAL MODEL IN THE RISK MANAGEMENT SYSTEM

The internal model is a key feature of SGLRI's risk management; see Sections E.4.1 and E.4.2 for a description of the internal model and some of its uses.

B.3.3.2 INTERNAL MODEL GOVERNANCE

The internal model governance framework forms an important component of the risk governance at SGLRI and seeks to ensure the appropriate management and supervision of the internal model and its outputs.

The governance framework includes in its scope the operational run of the model, model changes and Independent Validation as outlined in their own respective policies. The Internal Model Management Committee is responsible for ensuring that the internal model operates properly on a continuous basis. It approves internal model results and provides recommendations to the Board on model changes.

The development and use of SCOR's internal model are managed through the following three key policies, which are adopted by SGLRI:

- Group Internal Model Policy;
- Group Policy on Model Change;
- Group Internal Model Validation Policy.

The Group Internal Model Policy sets out the overarching principles and governance of the internal model. The Group Policy on Model Change sets out the principles and governance for managing the development of the model and the Group Internal Model Validation Policy sets out the principles and governance for the independent validation of the use and development of the internal model and requires that each module is validated at least every year for the annual SCR calculation or whenever there is model change with impact on the SCR or a significant change in the risk profile.

There were no material changes in the internal model validation governance during the reporting period.

B.3.3.3 INTERNAL MODEL VALIDATION PRINCIPLES AND TOOLS

SGLRI maintains a robust process for the validation of the internal model, which is completed in parallel with, and leverages, the Group process. It is performed based on the principles stated in the validation policy and fully complies with Solvency II internal model validation standards.

General principles

The validation of the internal model aims to review the reasonableness and accuracy of the internal model and the results thereof.

The main principles governing the validation process are:

- Independence and Expertise: the validation is performed by qualified experts who are independent from the design, implementation and run of the model.
- Proportionality: the validation work on the various components of the model is proportionate to the materiality of their impact on the results.

Governance

The Internal Model Independent Validation governance follows the overall internal model governance (as above) in Section B.3.3.1 – Role of the internal model in the risk management system.

B.3.4 ORSA CONTRIBUTION TO THE ERM FRAMEWORK

SGLRI's ORSA is a key mechanism of the ERM framework and is an integral part of the risk management system. It leverages the capital management and strategic planning processes.

The ORSA provides forward-looking information on the respective risk and capital positions of SGLRI, taking into account SGLRI's strategy and risk appetite and includes:

- descriptions of the risk profiles and the main risks SGLRI is exposed to;
- overviews of expected changes in the risk profiles over the ORSA time horizon; and
- prospective assessments of overall capital needs over the ORSA time horizon, taking into account SGLRI's strategy and risk profile, including an analysis of any excess or shortfall in the eligible own funds.

SCOR performs the Group-wide ORSA at both Group and legal entity levels based on clearly defined principles and objectives. It involves close cooperation between Group and SGLRI teams and regular involvement of Group and SGLRI Management, as well as the involvement of the SGLRI Board.

It is performed at least annually or more frequently when significant changes in the risk profile occur and the ORSA results are approved by the Board of Directors. (Refer to Section B.1.3.1 – Governance of SCOR Global Life Reinsurance Ireland dac).

B.4 Internal control system

B.4.1 INTERNAL CONTROL SYSTEM

SGLRI applies the Internal Control System (ICS) standards defined at Group level, which are embedded in the Group Policy on ICS. These standards consist of ICS principles and mechanisms to be applied to assess the effectiveness of the internal control system. The ICS is applied in line with the principle of proportionality.

B.4.1.1 DESCRIPTION

SGLRI operates an Internal Control System (ICS) which is consistent with the ICS adopted across SCOR Group. SCOR Group has an Internal Control System Competence Center (ICS-CC), whose core objective is to pool ICS expertise in order to foster a consistent ICS approach and application of ICS standards across the Group. The ICS standards are applied based on the principle of proportionality. ICS processes have been documented accordingly, focusing on those considered to be the most critical. The ICS documentation is regularly reviewed for continuous improvement.

The approach used to develop and maintain the ICS is specified in the Group Policy on ICS, which is adopted by SGLRI. The policy sets out the reference framework and details the principles, the responsibilities of the different participants in internal control and the quality requirements. The principal characteristics of the internal control system are as follows:

- a risk-based approach, i.e. addressing critical operational risks that, if not controlled, could significantly impact SGLRI's franchise, balance sheet or statement of income and indirectly its solvency. The optimal risk response is obtained through appropriately designed key controls;
- on a process level, appointment of process owners responsible for documenting the processes, identifying the related critical risks, defining the appropriate key controls and ensuring their deployment and application. Process owners are also responsible for assessing processes, risks and key controls;
- monitoring, upon completion of the initial documentation, through a self-assessment procedure on the maturity (quality) of control processes based on pre-defined criteria set by their owners.

The monitoring of the internal control and risk management systems is ensured by a number of complementary mechanisms with the support of several departments.

SGLRI implements dedicated processes and tools to identify, assess and monitor its risk exposures on a regular basis. In addition, SGLRI implements dedicated risk management mechanisms in order to evaluate the appropriateness and effectiveness of controls and propose risk management and mitigation measures.

In addition, and in accordance with its risk-based audit plan and through its periodic assignment, Group Internal Audit (GIA) provides independent and objective assessments on the adequacy, effectiveness and efficiency of the ICS. Any findings and risks lead to recommendations and management remediation actions which are followed up by GIA.

B.4.2 COMPLIANCE FUNCTION

B.4.2.1 ORGANIZATION OF THE COMPLIANCE FUNCTION

It is SGLRI's policy to ensure compliance with all applicable laws and regulations and the SCOR Group Code of Conduct wherever it conducts business. SGLRI holds itself to high standards when carrying on its business and at all times strives to observe the spirit as well as the letter of the law by continuously seeking to improve the effectiveness of its compliance management framework.

Compliance activities are mostly performed by the compliance function, which is composed of the legal and compliance teams (SGLRI Compliance & Regulatory Affairs Team, Group General Secretariat including the Group Compliance team and the Group Legal Department, Chief Legal Counsels, Hub legal and compliance teams and local compliance officers). There are also other departments responsible for specific areas (e.g. Prudential and Regulatory Affairs, Human Resources, Finance, SGLRI Head of Corporate Affairs), in line with the organizational structure of SCOR.

At SGLRI, the compliance key function holder is responsible for the compliance function.

It is also the responsibility of all employees to abide by the laws and regulations relevant to their day-to-day activities and the SCOR policies and guidelines applicable to them.

B.4.2.2 POSITION AND INDEPENDENCE PRINCIPLES

The compliance function both at Group and at SGLRI operates free of any influences that may compromise its ability to perform its duties in an objective, fair and independent manner.

At SGLRI, the Compliance Key Function Holder has direct access to the Chairman and CEO and reports at least annually to the Board of Directors regarding material compliance assessment and any breaches that may impact SGLRI's operations.

The compliance function has free and unfettered access to any records or staff member, as necessary to carry out its responsibilities.

B.4.2.3 COMPLIANCE FRAMEWORK

SCOR and SGLRI follow a risk-based approach to compliance in accordance with the SCOR Group Policy on Risk Management. This involves identifying areas of high risk within SCOR and SGLRI and prioritizing dedicated efforts and resources around these risks according to severity and probability, and establishing ongoing procedures aimed at Prevention, Detection and Response.

Prevention

Preventing compliance breaches includes:

- monitoring compliance-related regulatory developments, assessing their impact on SCOR and SGLRI and disseminating this information to the relevant governing bodies and employees;
- identifying, assessing and monitoring compliance risks;
- issuing compliance-related policies and guidelines;
- providing training to employees;
- providing advice to employees regarding specific compliance matters;
- implementing and maintaining compliance tools;
- maintaining a Code of Conduct awareness;
- introducing controls as part of SCOR's internal control system (ICS);
- providing reports on compliance matters.

Detection

Compliance breaches may be detected by any of the following:

- employee reporting process: all employees are responsible for ensuring compliance with applicable laws, regulations and policies in their daily duties as well as for escalating any actual or suspected compliance breach;
- controls as part of ICS procedures and other compliance tools;
- leverage from business unit cross-reviews, whereby an operational team in a different region from the entity subject to the review performs, checks and reviews compliance-related topics;
- audits conducted by Group Internal Audit;
- audits by external auditors (e.g. accounting and tax);
- operational loss events;
- complaints or litigation initiated by third-parties against SGLRI.

Response

In response to compliance breaches, SGLRI takes appropriate corrective actions to mitigate the consequences of the breach, and to prevent further reoccurrences of similar breaches in the future.

Employees who are found in breach of, or fail to comply with, applicable laws or regulations or the principles of this policy may be subject to disciplinary action in compliance with the laws applicable in the country of employment and/ or may be subject to criminal/ regulatory proceedings.

In addition, the Group Compensation Policy includes a reference to compliance with the Code of Conduct as a performance condition to be satisfied.

B.5 Internal Audit

The principles and organization as defined and implemented at Group level apply similarly to the Internal Audit function for SGLRI. The scope of internal audit engagements issued during the reporting period and audit plan – although deriving from the Group – are specific at legal entity level.

B.5.1 INTERNAL AUDIT ORGANIZATION

B.5.1.1 GENERAL PRINCIPLES

The Group Internal Audit's audit universe of potential areas within its scope includes all functions and operations carried out by SCOR. Group Internal Audit has no direct operational responsibility or authority over any of the activities it can review. Accordingly, Group Internal Audit does not develop or install systems or procedures, prepare records, take the

place of management who owns and makes decisions to manage its respective risks, or engage in any other activity which it can review.

Group Internal Audit assists the Board of Directors in providing independent, objective assurance and consulting services designed to assess the adequacy, effectiveness and efficiency of SCOR governance, policies and guidelines, risk management and internal control systems, as well as the compliance of operations with applicable policies and guidelines, in order to ensure the safeguarding and integrity of SCOR's assets (e.g. financial assets, human resources, systems and data), to ensure the effective use of resources and identify opportunities for process improvement.

Vis-a-vis SCOR subsidiaries and legal entities, Group Internal Audit is the outsourced provider of the internal audit function of legal entities in the scope of the Group Internal Audit Charter, to the extent it is compliant with local laws and regulations. If local obligations related to internal audit matters are not covered by the Group Internal Audit Charter, the Head of Group Internal Audit and legal entity's representatives, must act in a timely manner when implementing complements or adjustments as deemed adequate by the appropriate departments and described in an Internal Audit Charter Addendum.

B.5.1.2 ORGANIZATION WITHIN THE GROUP

Group Internal Audit is composed of Regional and specialized Internal Audit Units, managed by Deputy Heads who report directly to the Head of Group Internal Audit. There is no reporting line to the regional or other management.

Planning, Auditing and Monitoring: Regional/legal entities' Internal Audit Plans are integrated in the Group Internal Audit Plan. The Head of Group Internal Audit leads the internal audit department activities globally in order to avoid silo effects and ensure that (1) the same audit framework and methodologies are applied group-wide for each audit engagement and recommendations monitoring, (2) the auditors' assignments are based on skills in line with the audit objectives, benefiting from Group Internal Audit's resources and comply with rotating principles.

Reporting: The Head of Group Internal Audit can delegate to Regional Deputies the duties related to the internal audit reporting to pre-defined affiliates' Audit Committees and Supervisory Bodies. The Head of Group Internal Audit ensures that the reported information is aligned and consistent across the Group.

Exceptions: In specific cases where the general principles above are not applied, the case must be submitted for approval to the relevant Audit Committee, CEO and Chairman of the Board of SCOR SE, the Chairman of the Audit Committee of the Board of SCOR SE and other bodies as deemed necessary.

The Head of Group Internal Audit or a delegate (Deputy Head) is invited to, attend and reports during the regular Audit Committee meetings of SGLRI (and the other SCOR legal entities) on the internal audit activities and performance and meet privately with the Chairperson of the relevant Audit Committee (at least annually). For entities having no specific Audit committee, the Head of Group Internal Audit is invited to, attends and reports during the Board meeting. The Head of Group Internal Audit issues an annual report when asked to by the Audit Committee or required by laws or regulations.

B.5.1.3 INDEPENDENCE PRINCIPLES

Within SCOR, the Head of Group Internal Audit reports directly to the CEO and Chairman of the Board of SCOR SE, to provide the necessary independence, and allow it the greatest possible freedom of investigation, while at the same time ensuring the effective and timely implementation of its recommendations and management actions. The Head of Group Internal Audit also reports functionally to the Chairman of the Audit Committee of the Board of SCOR SE, who approves decisions regarding his/her appointment and removal and makes appropriate inquiries to ensure that audits are performed within an appropriate scope with adequate resources, and may steer Group Internal Audit's activities in a specific direction.

The Head of Group Internal Audit submits a written report to the SGLRI Audit Committee at least annually on the organizational independence of the Group Internal Audit function. If independence or objectivity is impaired in fact or appearance, the details of the impairment must be disclosed to appropriate parties. The nature of the disclosure should depend upon the impairment. This principle is applied in the same manner for SCOR Group entities

Group Internal Audit must and does have unrestricted access to all information, people, relevant systems and data regarding audit assignments and consulting projects, including easy access to and open communication with the department being audited and management.

B.6 Actuarial function

B.6.1 IMPLEMENTATION OF THE ACTUARIAL FUNCTION

The SGLRI Actuarial Function is organized along the same lines as the Actuarial Function for the Group.

An actuarial key function has been defined for the Group and all legal entities subject to the Solvency II Directive. These key functions are conducted under the responsibility of a key function holder.

The role of the actuarial key function is to:

- coordinate the calculation of Technical Provisions;

- ensure the appropriateness of the methodologies and underlying models used as well as the assumptions made in the calculation of Technical Provisions;
- assess the sufficiency and quality of the data used in the calculation of Technical Provisions;
- compare best estimates against experience;
- inform the AMSB of the reliability and adequacy of Technical Provisions;
- oversee the calculation of Technical Provisions in case of insufficient data of appropriate quality inducing the use of appropriate approximations, including case-by-case approaches, in the calculation of best-estimates;
- express an opinion on the overall underwriting policy;
- express an opinion on the adequacy of reinsurance arrangements;
- contribute to the effective implementation of the risk management system, in particular with respect to the risk modelling underlying the calculation of the capital requirements, and to the own risk and solvency assessment;
- produce an annual written Actuarial Function Report submitted to management, the Board and/or related committees on actuarial matters of the Group and the corresponding legal entities. The report includes a description of tasks undertaken by the actuarial key function, an opinion on the technical provision, overall underwriting policy and the adequacy of reinsurance arrangements, a description of any deficiency and recommendations on how such deficiencies can be remedied and
- the Domestic Actuarial Regime also requires the Actuarial Function Holder to provide an opinion to the Board on the ORSA process.

This role is undertaken by the Head of the Actuarial Function for SGLRI.

The cooperation with the three other key functions (risk management, internal audit and compliance key functions) is ensured via periodic interactions with the teams performing the tasks in the scope of these functions.

B.7 Outsourcing

B.7.1 OUTSOURCING PRINCIPLES AND ORGANISATION

The SGLRI Policy on Outsourcing sets forth the principles, framework and rules to be followed by all employees considering the outsourcing of critical or important functions by any SCOR entity to another entity, within or outside the SCOR Group. SGLRI's policy is aligned with the SCOR Group Policy on Outsourcing.

When outsourcing a critical or important function, a SCOR entity shall use appropriate and proportionate systems, resources and procedures in line with the risks involved in order to select a specific service provider. In particular, prior to entering into any such outsourcing relationship, SGLRI shall conduct a due diligence that is adequate and commensurate with the risks involved.

SGLRI monitors and reviews the quality of the service provided and maintains internally the competence and ability to assess whether the service provider delivers the service according to the outsourcing agreement.

Pursuant to Solvency II requirements, specific rules apply to the outsourcing of critical or important functions by SGLRI.

A critical or important function is defined in the Policy as a function essential to the operation of SGLRI, i.e. a function the interruption of which would be considered as likely to have a significant impact on:

- the activity of such an entity;
- the entity's ability to effectively manage risks; or
- the entity's regulatory authorization;

in view of the following:

- the cost of the outsourced activity;
- the financial and operational impact as well as the impact on the reputation of the SCOR entity as to the inability of the service provider to fulfill its obligations on time;
- the difficulty of finding another service provider or resuming live activity;
- the ability of SGLRI to meet regulatory requirements in case of problems with the service provider; and
- the potential losses for insured parties, policyholders or recipients under contracts or reinsured businesses in case of default by the service provider.

The outsourcing of a critical or important function by SGLRI shall be subject to the following process:

- a cost/benefit analysis of the possible outsourcing will be conducted and the business case associated with such possible outsourcing will be reviewed by the appropriate governing body of SGLRI;
- the outsourcing of a critical or important function will be supervised by a process owner for the entire duration of the outsourcing;

- the process owner will carry out adequate financial, technical and compliance and regulatory due diligences;
- a specific review of existing or potential sub-outsourcing relationships will be carried out;
- a review of the adequacy of the service provider contingency plan will be conducted;
- an outsourcing agreement will be executed including specific provisions allowing SGLRI to adequately control and monitor the quality of the critical or important functions outsourced.

B.7.2 MAIN INTRAGROUP OUTSOURCING ARRANGEMENTS

The SCOR Group operates through a Hub structure whereby certain Hub employees provide services to SCOR Group entities operating in the relevant Hub jurisdictions. In addition, the SCOR Group has developed centers of expertise for certain services, located in some Hubs, which provide expertise to all SCOR Group entities including SGLRI.

As a result, parts of certain critical or important functions may be outsourced to the SCOR staff responsible for carrying out tasks in support of the execution of the critical or important function, in the Hubs in which the relevant SCOR EU entity operates.

These outsourcing relationships are documented through adequate outsourcing agreements and closely monitored by (i) the key function holder of SGLRI for the specific key function, or (ii) the duly designated person of SGLRI in charge of monitoring.

The risk management function is partly outsourced by SGLRI, including structuring and validation of the internal model when relevant to the Group Financial Modelling & Risk Analysis team of SCOR Services Switzerland AG and to the Group Actuarial Modelling team of SCOR SE. Other SCOR EU entities may provide services in support of the execution of this key function, when necessary. These outsourcing relationships are documented through adequate outsourcing agreements and are closely monitored by the risk management key function holder for SGLRI.

The compliance function is partly outsourced by SGLRI, to the relevant legal and compliance teams based in the jurisdictions and regions where it operates, notably the Hub legal and compliance teams managed by Hub General Counsels. This outsourcing relationship is documented through adequate outsourcing agreements and closely monitored by the compliance key function holder for SGLRI.

The internal audit function for SGLRI is outsourced to the Group internal audit team hosted by SCOR SE. In the execution of its mission, the Group internal audit team of SCOR SE relies on all its staff employed in various SCOR entities. This outsourcing relationship is documented through adequate outsourcing agreements and are closely monitored by the internal audit key function holder for SGLRI.

Actuarial operations are outsourced by SGLRI to SCOR SE, SGLA, SCOR Reinsurance Asia Pacific Korea Branch and SCOR Services Asia Pacific Pte Ltd. Other SCOR EU entities may provide services in support of the execution of this key function, when necessary. These outsourcing relationships are documented through adequate outsourcing agreements and are closely monitored by the designated person for SGLRI.

Claims handling activities, considered as critical and important activities by SCOR, are outsourced by SGLRI, to some extent and when relevant to SCOR SE, SGLA and SCOR Services Asia Pacific Pte Ltd. These outsourcing relationships are documented through adequate outsourcing agreements and closely monitored by the designated person for SGLRI.

The asset management activities are outsourced by SGLRI to SCOR SE. This outsourcing relationship is documented through adequate outsourcing agreements and are closely monitored by the designated person for SGLRI.

IT is outsourced by SGLRI, to some extent and when relevant, to SCOR SE. This outsourcing relationship is documented through an adequate outsourcing agreement and is closely monitored by the designated person for SGLRI.

Accounting activities, considered as critical and important activities by SCOR, are outsourced by SGLRI, to some extent and when relevant to SCOR SE, SGLA, SCOR Reinsurance Asia Pacific Korea Branch and SCOR Services Asia Pacific Pte Ltd.. The outsourcing relationship is documented through adequate outsourcing agreements and are closely monitored by the designated person for SGLRI.

B.7.3 MAIN OUTSOURCED ACTIVITIES WITH EXTERNAL PROVIDERS

As of the date of this report, SGLRI has not outsourced any critical or important functions to any external service providers outside the SCOR Group.

B.8 Other material information regarding the system of governance

No other material information is reported regarding SGLRI's system of governance, other than that presented in sections B.1 – General information on the system of governance to B.7 – Outsourcing.

C.RISK PROFILE

C.1 Introduction

C.1.1 GENERAL INTRODUCTION

SGLRI regularly conducts reviews of the risks that could have a material adverse effect on its activity, its financial situation or results (or capacity to reach objectives) and considers that no significant risk exists other than those disclosed in the section below. This section outlines the management's current view of SGLRI's main risks and main risk management mechanisms currently in place.

SGLRI has identified the following categories of risks:

- Underwriting risks related to the Life reinsurance businesses;
- Market risks;
- Credit risks;
- Liquidity risks;
- Operational risks;
- Strategic risks (refer to Section C.7.1 – Strategic risk).

These risks described in this chapter are managed through a variety of mechanisms in SGLRI's ERM framework.

SGLRI's ERM framework is further described in:

- Section B.1 – General information on the system of governance for a description of the role of the administrative and management bodies involved in the risk management system and related control functions;
- Section B.3 – Risk management system including the ORSA for a wider description of SGLRI's risk management system as well as the role of the main stakeholders involved in risk management and relevant procedures and control activities;

Although risk management mechanisms have been designed and rolled out in order to prevent all risks from having a significant impact, there is no guarantee that these mechanisms achieve their intended objective. Many of SGLRI's methods for managing risk and exposures are based on observed historical market behavior, statistics based on historical models, or expert judgment. As a result, these methods may not fully predict future exposures, which may be significantly greater than estimated, particularly in unstable or volatile markets and environments. Other risk management methods depend upon the evaluation of information regarding markets, clients, natural catastrophes or other matters that is publicly available or otherwise accessible to SGLRI. This information may not always be accurate, complete, up-to-date or properly evaluated.

SGLRI may also be exposed to emerging risks, which include new threats or constantly changing current risks with a high degree of uncertainty. They may arise from the numerous changes to the environment in which SGLRI operates, such as changes in professional practices or in political, economic, financial, fiscal, legal, regulatory, jurisdictional, social and environmental conditions.

Emerging risks may adversely affect SGLRI's reinsurance business due to either a change in interpretation of the contracts leading to extensions of cover beyond what policyholders had expected (e.g. due to the inapplicability or interpretation of certain clauses) or by increasing the frequency and/or severity of claims. Such risks may also lead to higher fluctuations than expected in macro-economic indicators such as interest rates and price level, or disruptions in financial markets, further impacting SGLRI's business. In addition, emerging risks may also have a direct impact on SGLRI's operations, for instance by generating unexpected additional expenses.

Specifically, climate change creates a number of challenges for the re/insurance industry and therefore for SCOR. Climate change is likely to interact with the risks associated with SCOR's strategy, underwriting, investments and operations through physical climate risks (e.g. effects of broad climate trends or "chronic" risks and the frequency and/or severity of natural catastrophes or "acute" risks), the creation of transition risks (through the shift towards a low-Carbon economy) and through the potential for negatively impacting SCOR's reputation.

Therefore, SGLRI cannot exclude the possibility of its risk exposures exceeding the risk tolerance limits due to an incorrect estimation of these risk exposures. If the risks disclosed in this section were to occur, they could potentially have a significant effect on SGLRI's present and future business, cash flows, eligible own funds and solvency position.

As mentioned in Section B.3.3 – Internal Model contribution to the ERM framework, the risk categories reported in the Internal Model include, life underwriting and reserving risk, market risk including interest rate risk and currency risk, credit risk, and operational risk.

For further information on risks included in SCOR's internal model, refer to Chapter E – Capital Management.

SGLRI is exposed to other risks not modelled within the internal model including strategic, liquidity and emerging risks. These risks are not expected to have an immediate impact on the Solvency Ratio over a one-year time horizon and are monitored and managed through specific processes.

For quantitative information on all risk categories, including changes over the reporting period, refer to Section E.2.1 – Solvency Capital Requirement.

Uncertainties related to the evolution of the Covid-19 crisis and its impact on SCOR's risk profile

On March 11, 2020, the World Health Organization (WHO) declared the Covid-19 outbreak a global pandemic. The Group adopted early and strict prevention measures to protect the health of its employees and has been active in regularly sharing its knowledge and expertise on the pandemic. Thanks to the resilience of its operational capability, the Group has been able to continuously serve its clients during this on-going crisis.

Whilst progress has been made for containing the spread of the virus over the course of 2020, e.g. through safety or lock-down measures, various countries across the world experienced second waves and face the threat of additional waves. While the situation is expected to improve following the recent successful development of vaccines, uncertainty remains regarding availability, efficacy, effectiveness and take-up rate of the vaccines. Therefore, the pace of a successful containment of the pandemic and the shape of the economic recovery and resulting effects on future (re)insurance loss developments remain difficult to predict.

The main material impacts on SCOR's risk profile due to the Covid-19 pandemic originate from underwriting risks related to the Property & Casualty (P&C) and Life reinsurance businesses, and from the risks associated with SCOR's invested assets portfolio. The operational implications of the progressive closure of SCOR's offices as the virus has spread across the globe, have been mitigated to a large extent by the successful implementation of SCOR's Business Continuity Plan (BCP). The BCP has provided the required IT infrastructure and support for SCOR's activities to be continued by employees working from home, whenever deemed necessary. Increased external cyber-attacks have been observed since the start of the pandemic, though no attempts against SCOR have been successful.

The full impact of the Covid-19 crisis on SCOR's business and results can still not be accurately assessed at this stage, given the uncertainty related both to the magnitude and duration of the Covid-19 pandemic resulting from the considerable difficulty in working on sound assumptions related to the duration of the pandemic, its impact on health, both short term and long term, the availability, efficacy, effectiveness and take-up rate of the vaccines, the response of government bodies worldwide, the potential judicial actions or social influences, the coverage and interpretation of SCOR's contracts under these circumstances, and the assessment of the net claims estimates and the impact of claims mitigation actions.

In addition, the global spread of Covid-19, which is still ongoing, has been creating significant uncertainties which might affect SCOR, and which pose material risks to its risk profile.

In the current environment, there are a number of uncertainties that affect how the pandemic continues to develop and therefore its ultimate impact on people and the wider economy. These uncertainties fall into two main areas: epidemiological and medical uncertainties and social and economic uncertainties.

These uncertainties relate to:

- the ongoing transmission rate of the virus (depending on e.g. effectiveness of lockdown/social distancing/ "track and tracing" measures, whether individuals develop lasting immunity to the virus following infection or vaccination, the emergence of more contagious virus strains, or the speed of the roll-out of the vaccine to the general population);
- the number of deaths resulting from infection with Covid-19 (related to e.g. the fatality rate of the virus and new mutations and the ability to provide effective treatments and/or vaccine development);
- the excess mortality from related factors other than deaths from infection with Covid-19 e.g. mortality from people that were prevented from receiving healthcare (including preventative screening for other conditions) and mortality from "deaths of despair" related to the economic shock;
- potential further lockdown measures: following an easing of lockdown measures and encouragement to return to normal activities by many countries mid-2020, new and severe additional waves of infection have emerged towards the end of 2020, leading many countries to impose new and stricter lockdown measures and social distancing requirements to slow the spread of the virus. However, it is impossible to know to what extent people will continue to observe social distancing and sanitary rules during everyday interactions. It is therefore possible that ongoing waves worsen, take longer to disperse or that further waves of infection occur in many countries, with the necessity of imposing further lockdown measures. Therefore, although the immediate economic impacts of imposing lockdowns are severe, it is more difficult to predict the extent and persistency of these measures over time and thus the longer-term economic impacts;
- future support to the economy: the scope, quantum, and pace of government and central bank support to the economy are much larger than in previous crises. While the fiscal and monetary policies should limit the number of defaults and therefore enable a quicker post-crisis recovery, it is uncertain whether these measures will be sufficient to tackle the full spectrum of the economic consequences from the Covid-19 crisis, particularly in the event of future infection waves and lockdowns, and to what extent these measures will be maintained.

Uncertainties on the sustainability of this support could inhibit investment, innovation, and productivity, and destabilize financial markets. Whilst consensus forecasts are more optimistic than in June, given a better than anticipated rebound of the activity in the second and third quarter, the delay or ineffectiveness of the vaccine rollouts could result in an increasing share of the negative shock on GDP level and growth rate becoming permanent.

As Covid-19 affects SCOR's risk profile across the risk categories identified by SCOR, the related risks for SCOR are addressed within the next sections. SCOR may be exposed to a number of other risks over the medium-term as the pandemic develops and as related consequences come to light.

C.1.2 SENSITIVITY ANALYSIS

SGLRI maintains a resilient solvency position. SGLRI monitors its Solvency Ratio sensitivity to the economic assumptions which could have the most significant impact on the Solvency Ratio over the coming year.

For more information on interest rate risk see Section C.3.1.1 – Interest rate risk.

Sensitivity to underwriting risks is evaluated through a variety of mechanisms explained in Section B.3.2.3 – Identification and assessment of risk. These include the analysis of extreme scenarios corresponding to the estimated post-tax net 1-in-200 year annual single event exposures or aggregate exposures. Sensitivity analysis for SGLRI is performed on a look through basis to reflect the risks related to the participation in SLI. The most significant exposures for SGLRI under these measures are a long-term mortality deterioration, long term longevity improvements or a mortality shock (e.g. a pandemic).

C.2 Underwriting risks

The main risk SGLRI faces in relation to insurance and reinsurance contracts is that the actual amounts of claims and indemnity payments, or the timing thereof, differ from estimates. Additionally, SGLRI is dependent on the quality of underwriting of its cedents for certain reinsurance treaties and on the quality of claims management by these companies and the data provided by them. In view of these uncertainties, SGLRI seeks to ensure that sufficient reserves are available to cover its liabilities.

Generally, SGLRI's ability to increase or maintain its portfolios of insurance and reinsurance risks may depend on external factors such as professional practices, legal, jurisdictional, regulatory, social, political, economic, financial and environmental conditions. These factors create uncertainties and may adversely affect SGLRI's business due to either an interpretation of the contracts leading to an extension of coverage (e.g. through inapplicability or interpretation or overriding of treaty clauses) or by increasing the frequency and/or severity of claims beyond what was anticipated at the time of the underwriting.

SGLRI mitigates its underwriting risks through the purchase of risk mitigation covers, in the traditional retrocession market and through internal retrocession with other SCOR entities. However, there is a risk that SGLRI may not be able to transfer its liabilities through the purchase of such instruments on economically viable terms and conditions in the future. For further details on retrocession and other risk mitigation techniques, see Section C.2.3 – Retrocession and other risk mitigation techniques.

SGLRI predominantly underwrites Life & Health Business from SCOR affiliates but also directly reinsures business from external clients.

C.2.1 LIFE REINSURANCE

The main underwriting risks for SGLRI are described below. For quantitative information on Life underwriting risks refer to Section E.2.1 - Solvency Capital Requirement.

LONG-TERM MORTALITY DETERIORATION

This risk refers to potential negative deviations in future mortality relative to current best-estimate assumptions due to a higher than anticipated number of deaths (i.e. increased mortality rates) among the portfolio of lives reinsured by SGLRI. This could result from inherent volatility, initial incorrect estimation of the expected claim level or an adverse long-term trend.

PANDEMIC

In Life reinsurance, a severe pandemic is a major risk. In the past century, three major outbreaks of influenza occurred and claimed millions of lives. Most recently in March 2020, the Covid-19 outbreak was declared a global pandemic. Please refer to section C.1.1 for uncertainties relating to Covid-19 and how it has been impacting SCOR's risk profile. The occurrence of such events could cause large losses to SGLRI due to an increased mortality far beyond the usual volatility. A lethal virus strain not only of influenza but of any other communicable disease could lead to a material increase in mortality rates and increased medical costs which could significantly affect SGLRI's results.

LONGEVITY

Longevity risk refers to the risk of a negative deviation from expected results due to the insured or annuitant living longer than assumed in the pricing or reserves. This risk could have an impact on longevity swaps, annuity and on other longevity protection products.

POLICYHOLDER BEHAVIOR RISKS

SGLRI is also exposed to risks related to policyholder behavior, such as lapsation and adverse selection.

Lapses refer to either non-payment of premiums by the policyholder, or to policies which are terminated by the policyholder before the maturity date of the policy. Depending on product design and other factors, higher or lower policyholder lapses than assumed in the pricing or reserving may reduce SGLRI's expected future income.

Adverse selection refers to the problem of asymmetry of information between the insured and the insurer. An individual applying for Life or Health insurance cover usually has better knowledge about his or her own state of health than the insurer. The risk to the (re)insurer is of policyholders deliberately deciding among other things to:

- take out a policy in the knowledge that either their chances of claiming are high or higher than average;
- terminate a policy in the knowledge that their chances of claiming are low or lower than average, or;
- choose and exercise a policy option which increases their expected benefit.

This might lead to a portfolio composition which differs from the one assumed during pricing and might imply lower than expected profits for both the direct insurer and the reinsurer.

MORBIDITY RISKS

Products such as critical illness, short-term and long-term disability and long-term care, which all contain morbidity risk, are subject to the risk of negative trends in health, as well as to the consequences of improved medical diagnosis capabilities which increase the number of claims due to conditions that otherwise would possibly have remained undetected. Medical progress may in the future enable better treatment, resulting in higher claims, since certain diseases would have otherwise led to a much shorter life expectancy of the insured. Products providing cover for medical expenses are subject to the risk of higher than expected incidence and inflation of medical costs.

Other risks

Risk concentrations

Accepting large amounts of risks may produce risk concentrations, such as exposure to certain regions or events. The largest concentration of risk in the Life business is in relation to long term mortality deterioration and mortality shock events (e.g. pandemics).

OTHER RISK CONSIDERATIONS

In addition to the main underwriting risks of SGLRI as listed above, other factors could have an adverse impact, whether related to policyholder behavior such as morbidity, resale or purchase of policies by third parties with no insurable interest, or other risk factors such as risks related to product guarantees.

Climate change could also have impacts on the Life reinsurance business which could manifest both in adverse events and in long-term trends. For instance, increases in the frequency and severity of extreme heat events have the potential to negatively influence mortality and morbidity through, for example, the aggravation of cardiovascular and respiratory illnesses. Natural catastrophes, such as wildfires and hurricanes, are likely to claim more lives with increasing severity. Over a longer time horizon, rising temperatures will change the patterns of disease distribution, for example, through expansion in the geographic range of disease vectors such as mosquitos. Various other mechanisms through which climate change could impact the life reinsurance business are being investigated.

MANAGEMENT OF UNDERWRITING RISKS RELATED TO THE LIFE REINSURANCE BUSINESS

In addition to the transversal risk management mechanisms described in the introduction to this section, SGLRI also implements mechanisms to mitigate certain risks specific to Life reinsurance:

- Claims deterioration risks are mitigated through yearly renewable terms for parts of the mortality business, and through premium adjustments for some products.
- Lapse risks are mitigated through appropriate reinsurance treaty clauses, as well as product and client diversification.
- Adverse selection risks are mitigated through careful product design and a well-defined medical and financial underwriting process.
- Generally, the Life reinsurance business is underwritten throughout the year. The Life business underwritten is monitored on a quarterly basis against prior year development as well as the business plan and regular updates are provided to the Board Committees and Management Committees.

- The Life business is underwritten in accordance with internal underwriting and pricing guidelines. Mandates for underwriting Life reinsurance business are assigned to teams on a mutually exclusive basis.
- In order to ensure that SGLRI is continually up-to-date with biometric trends and scientific developments, the expertise of specialists is used to analyse and assess the key factors underlying mortality, longevity, morbidity and policyholder behavior. These teams provide recommendations for the implementation of the research results into the pricing, underwriting and determination of exposure limits. Regarding the potential impacts of climate change, SCOR's specialists are following medical literature to identify the links between climate change and certain medical conditions and diseases. Where appropriate, this information is fed into decisions related to current and future underwriting, pricing and valuation of reserves.

- Guidelines and other documents defined by the Life business unit specify the underwriting rules and principles to be complied with, underwriting capacities delegated to the underwriters and pricing actuaries in each of the markets in which the Group operates, as well as maximum acceptable commitments per risk and per event. These guidelines outline contract type and terms and conditions of acceptance. Furthermore, they set out the level of retention of SCOR's Life business unit for various risks and types of cover. Revisions and updates follow a formalised approval process

Business opportunities going beyond the stipulations of these guidelines and documents are subject to a special referral process in order to ensure that the business complies with established risk-adjusted return criteria and risk tolerance limits. These cases are examined at the Life business unit level by Business Acceptance Department and, where applicable, the Finance Department. Cases which may have a significant impact on the balance sheet of the Group are submitted for a second review by the Risk Coverage area. Thresholds or conditions for a referral to Group Risk Management are outlined in specific SGLRI guidelines.

- Accumulations of risk particularly exposed to catastrophes in the Life business are regularly assessed in "footprint" scenarios and local catastrophe scenarios. Specific tools are used to monitor known Group cover accumulation in selected geographical areas. Specifically designed retrocession programs aim at protecting the Life reinsurance business. One program protects assumed catastrophe excess of loss acceptances; another one protects the net retained lines in respect of proportional and per risk acceptances. SGLRI uses the Risk Management Solution (RMS) model for infectious diseases in order to assess the potential exposure to risk arising from global pandemics.
- Maximum underwriting capacities are established to limit SGLRI's exposure from various types of treaties underwritten, proportional and non-proportional, covering individual or Group policies. These capacities are reviewed each year, taking into account the capacities obtained by retrocession coverage. The exposure is monitored throughout the year against defined risk limits and used for decisions on mitigating measures. Monitoring of peak exposures is included in Life regular risk reporting. See Section C.2.3 - Retrocession and other risk mitigation techniques for further information on how these instruments are managed.
- Claims handling is performed by local claims teams or outsourced to other SCOR affiliates as appropriate. Claims exceeding a predefined threshold are reviewed by the Life business unit's medical underwriting and claims specialists. In addition, where deemed appropriate, audits are conducted on claims or specific lines of business at the ceding companies' offices.
- The adequacy of SGLRI's Technical Provisions is monitored based on specific procedures. For further information on how risks related to Technical Provisions are managed, please see Section C.2.2 - Risks related to Technical Provisions.
- Risks specific to the management of contracts are mitigated by specific controls supported by SCOR's IT systems which include numerous automatic controls and additional tools.
- A review of technical results is performed on a quarterly basis.
- SGLRI's Risk Management Department organizes regular meetings of the Board Risk Committee, which is responsible for reviewing the main risks to which SGLRI is exposed.

RISKS RELATED TO TECHNICAL PROVISIONS

SGLRI'S RISKS RELATED TO TECHNICAL PROVISIONS

SGLRI's technical provisions are established based on the information it receives from its cedent insurance companies, including their own assessments, as well as on the basis of its knowledge of the risks, the studies it conducts and the trends it observes on a regular basis. As part of the technical provisions process SGLRI reviews available historical data and tries to anticipate the impact of various factors such as changes in laws and regulations, judicial decisions, social and political attitudes, trends in mortality and morbidity, and changes in general economic conditions.

If some information were to be incorrect and/or incomplete, this could have an adverse effect on SGLRI.

As is the case for all other reinsurers, the inherent uncertainties in estimating technical provisions are compounded by the significant periods of time that often elapse between the occurrence of an insured loss, the reporting of the loss to the primary insurer and ultimately to SGLRI.

Another factor of uncertainty resides in the fact that some of SGLRI's activities are long-term in nature such as, whole Life products or, longevity reinsurance. It has, in the past, been necessary for SGLRI to revise estimated potential loss exposure on such lines of business.

MANAGEMENT OF TECHNICAL PROVISIONS RISK

With regards to technical provisions risk, SGLRI seeks high confidence in their adequacy based on the implementation of generally accepted actuarial methodologies, fit for purpose tools and robust processes, controls and reconciliation validated by extensive risk management actions, in particular on assumptions, expert judgment, model, data quality and results. This also includes independent internal and external reviews.

SGLRI's Solvency II Best Estimate Liabilities (BEL) are audited as part of the Central Bank of Ireland's requirement to have an external audit of Solvency II regulatory returns. If necessary, internal audits of its portfolios are performed.

All of these processes and controls tend to minimise the risk of inadequate technical provisions.

In order to ensure an adequate and efficient monitoring of the reserves, the Actuarial Function Report (AFR) is prepared on a yearly basis by the Actuarial Function Holder where he provides his opinion on the adequacy of the reported year-end technical provisions. The main objective of this report is to provide the Board, Audit Committee and management with an overall opinion on the adequacy of SGLRI's technical provisions but also to highlight the inherent uncertainties surrounding this assessment.

Solvency II Technical Provisions

The Solvency II Technical Provisions are composed of BEL and the Risk Margin. The Actuarial Function holder coordinates the calculation of Technical Provisions. He relies upon the existing processes and controls as provided in the AFR. The AFR provides evidence that the duties of the Actuarial Function, insofar as they relate to Technical Provisions, are being fulfilled, which are specifically to:

- Coordinate the calculation of the technical provisions;
- Ensure the appropriateness of the methodologies and underlying models used as well as the assumptions made in the calculation of technical provisions;
- Assess the sufficiency and quality of the data used in the calculation of technical provisions;
- Compare best estimates against experience;
- Oversee the calculation of technical provisions in the cases set out in Article 82 of the Solvency II Directive;
- Inform the administrative, management or supervisory body of the reliability and adequacy of the calculation of technical provisions.

For further information on how technical provisions are valued, refer to Section D.2 – Technical provisions.

The contribution of the Actuarial Function to the management of the risk on technical provisions includes additional specific controls:

- The BEL is computed centrally based on projected Best Estimate cash flows. Consistency checks on projected cash flows are carried out, as well as analysis on changes in the BEL compared to previous periods.
- The risk margin is calculated in SCOR's internal model, which is subject to an independent validation (for further information on the IM related governance, refer to Section B.3.3 – Internal model contribution to the ERM framework). The methodology used is aligned with Solvency II requirements.

For further information on how the Actuarial Function contributes to the effective implementation of the risk management system, see Section B.6 – Actuarial function.

C.2.2 RETROCESSION AND OTHER RISK MITIGATION TECHNIQUES

Reinsurers typically purchase reinsurance to cover their own risk exposures. Reinsurance of a reinsurer's business is called retrocession. SGLRI remains primarily liable to the direct insurer on all risks reinsured although the retrocessionaire is liable to SGLRI to the extent of the cover limits purchased.

The level of retrocession is selected each year to ensure that SGLRI's retained risk profile respects the specific SGLRI risk appetite framework and to help SGLRI achieve its return on capital and solvency objectives.

SGLRI aims to diversify its retrocession and risk mitigation instruments as well as counterparties in order to take advantage of all different sources of capacities on the market. This enables the retrocession and risk mitigation program to be constructed with complementary mitigation effects offering optimal efficiency and also to avoid overdependence on a limited number of counterparties for future placements.

SGLRI Risk Management co-ordinates with a Life centralised retrocession team to determine and place retrocession coverage. The retention and the retrocession structure are revised every year.

The availability and efficiency of SGLRI's retrocession and risk mitigation program is monitored on a regular basis in order to ensure that SGLRI's overall exposure remains within pre-defined risk tolerances.

For further information on how credit default risk related to retrocessionaires is managed, refer to Section C.4.1.1 - Credit risk related to bond portfolios.

In addition to externally placed retrocession, SGLRI uses intragroup reinsurance/retrocession mainly in order to:

- (1) manage SGLRI's net risk profiles, required solvency capital and volatility of results;
- (2) organize an internal pooling of risks to transfer to the external retrocession covers.

C.3 Market risks

C.3.1 MARKET RISKS – RISK OVERVIEW

Market risk is the risk that the fair value of future cash flows of a financial instrument fluctuates because of changes in market prices or macro-economic variables. This includes:

- interest rate risk,
- currency risk
- equity risk
- real estate risk,
- credit spread risk on these invested assets

For further information on credit risk, refer to Section C.4 – Credit risks.

Market risks can also be influenced by various over-arching factors, including political, macro-economic, monetary, societal and environmental trends. Environmental trends encompass risks linked to sustainability, including those as a consequence of climate change, which can impact any of the market risks listed above. Specifically, climate risks correspond to the risk that the value of assets could be negatively impacted by acute physical risks, risks linked to the transition to a low carbon economy and the potential for risks to SCOR's reputation linked to investment choices.

For further information on how other macro-economic changes (such as changes in the general price level from its current trend) may impact SGLRI's assets, refer to Section C.7.1.1 – Risks related to macro-economic environment affecting SGLRI's strategy.

For quantitative information on market risk on invested assets, refer to Section E.2.1 – Solvency Capital Requirement. The presentation of SGLRI's assets giving rise to market and credit risks is provided in Section D.1 – Assets.

INTEREST RATE RISK

Interest rate risk is the risk that the fair value of future cash flows of a financial instrument fluctuates because of changes in interest rates. Interest rate fluctuations have direct consequences on both the market value and the return on SGLRI's assets.

Interest rates are very sensitive to a number of external factors, including monetary and budgetary policies, the national and international economic and political environment, and the risk aversion of economic actors.

During periods of declining interest rates, income from investments is likely to fall due to investment of net cash flows and reinvestments of redemptions at rates lower than those of the existing portfolio (dilutive effect of new investments). For callable bonds for which the issuer has an option to redeem earlier than the ultimate maturity, the probability of having to reinvest the early proceeds at lower interest rates is increased. The current low yield environment increases the potential materialisation of this risk.

On the other hand, an increase in interest rates could lead to a fall in the market value of fixed income securities that SGLRI holds.

SGLRI's reinsurance business is also exposed to interest rate risk. The value of certain life insurance contracts, the risk margin and deposits with cedents are also subject to discounting. The discounting impact from a change in interest rates on assets and liabilities will offset to some extent. For information on interest rate sensitivities see Section C.1.2-Sensitivity Analysis.

Finally, the interest rate risk depends on the duration mismatch between assets and liabilities. As such, changes in interest rates can affect Eligible Own Funds, the Solvency Capital Requirement and the Solvency Ratio of SGLRI.

CURRENCY RISK

Currency risk is the risk of loss arising due to adverse changes in or volatility of foreign exchange rates. This would impact the value of SGLRI's assets (e.g. through direct investments in assets denominated in various currencies) and liabilities (e.g. reinsurance treaties with liabilities denominated in specific currencies).

Translation risk

SGLRI reports in USD, which is consistent with the majority of its liabilities. Nevertheless, a material part of its liability portfolio is denominated in currencies other than USD. Consequently, fluctuations in the exchange rates used to convert these currencies into USD may have a significant impact on its reported net income and net equity from year to year.

Equity risks

SGLRI has a participation in SLI. However, from a risk profile perspective this is considered on a look through basis.

REAL ESTATE RISK

SGLRI does not currently have any real estate holdings.

CREDIT SPREAD RISK

Credit spreads reflect the market's assessment of the credit quality of a financial instrument (e.g. a bond) and are derived from the market value of the instrument. Credit spread risk is the risk that the credit spread increases i.e. the market value deteriorates leading potentially to a loss on the financial instrument.

Credit spread risk on invested assets is the risk of incurring a financial loss arising from the change in market assessment of the counterparty risk of the financial instruments or counterparties. Credit spread variations could have a direct impact on the market value of SGLRI's fixed-income securities and loans.

C.3.2 MANAGEMENT OF MARKET RISKS

OVERVIEW OF RISK MANAGEMENT OF ASSETS

The investment strategy is prudent with the majority of assets held in cash and fixed income securities. It is defined in line with the risk appetite and risk tolerance limits and considers the economic and market environment and the ALM (asset liability management) process.

Investment Guidelines outline the investment universe and limits, including concentration limits, in line with the risk appetite. They are approved by the Board of Directors or Investment Risk Committee.

SGLRI has outsourced the implementation of its investment strategy to SCOR SE who have in turn outsourced the activity to the asset management company "SCOR Investment Partners SE". They are provided with the Investment Guidelines.

Exposures to major risks are monitored frequently and stress tests measure the impact of changes in risk drivers on the invested assets portfolio. These scenarios cover changes in interest rates, inflation, equities, credit spreads and real estate market. Analyzing portfolio sensitivity to major risks is an important management tool which is used when making portfolio reallocation or hedging decisions.

In currency and geographic terms, SGLRI is exposed to USD denominated assets with a strong focus on fixed income, through its participation in SLI. In terms of business sector, SGLRI is mainly exposed to Consumer Business and Government bonds. For more information regarding the principles applied to invest the assets in a prudent manner see Section B.3.2.7 – Asset Management.

MANAGEMENT OF INTEREST RATE RISK

Interest rate risk is managed from a holistic point of view. SGLRI monitors the interest rate sensitivity in the EBS. Stress tests and regular monitoring enable the exposures to be compared with risk tolerance limits set by SGLRI.

SGLRI aims to maintain an appropriate mix of fixed and variable rate instruments. It also manages the maturities of interest-bearing financial assets.

MANAGEMENT OF CURRENCY RISK

As SGLRI matches the currency risk on a Group IFRS basis, for other reporting bases such as Solvency II, SGLRI may have a residual exposure to currency risk. In particular, fluctuations of the non-US currencies, particularly Sterling and Euro, may have an adverse effect on eligible own funds from year to year.

MANAGEMENT OF EQUITY RISK

SGLRI's only equity is its participation in SLI. The exposure to SLI is closely monitored by SGLRI and the risks stemming from it are considered on a look through basis to provide an appropriate view of the actual risk profile of the Company.

MANAGEMENT OF REAL ESTATE RISK

SGLRI does not currently have any real estate holdings.

MANAGEMENT OF CREDIT SPREAD RISK

SGLRI applies strict limits in terms of asset concentration by asset class but also within a single asset class and actively diversifies its portfolio (by type of investment, by issuer, by country and by sector). The application of these limits also helps to mitigate the credit default risk arising from investments.

C.4 Credit risks

For quantitative information on credit risk, refer to Section E.2.1 – Solvency Capital Requirement. The presentation of SGLRI's assets giving rise to market and credit risks is provided in Section D.1 – Assets.

C.4.1 CREDIT RISKS

Credit risk is the risk of incurring a loss as a result of an unexpected change in the financial situation of a counterparty.

This includes credit default risk which is the risk that one party to a financial instrument or other asset will cause a financial loss to the other party by unexpectedly failing to discharge, either partially or fully, an obligation. Credit risk also includes credit migration risk, which is the risk of incurring a financial loss, due to a change in the value of a contractual agreement following unexpected changes in the credit quality of our counterparties.

SGLRI is mainly exposed to the following credit risks or the accumulation of such risks in a single counterparty, in the same sector of activity or the same country: from bond portfolios, liabilities retroceded also called share of retrocessionaires in contract liabilities, deposits with cedents, future cash-flows from Life reinsurance treaties and cash deposits at banks.

Credit risk is actively monitored and managed. The processes for managing the respective credit risks and the methods used to measure these risks are further described below. For further information on risk concentrations, refer to Section C.7.2 - Significant risk concentrations.

CREDIT RISK RELATED TO BOND PORTFOLIOS

A deterioration in the financial situation of an issuer (sovereign, public or private) can, for example, lead to its insolvency and to the partial or total loss of coupons and of the principal invested or lead to a loss in value.

CREDIT RISK RELATED TO RETROCEDED LIABILITIES

SGLRI transfers part of its risks to retrocessionaires via retrocession programs in exchange for the payment of premiums. The retrocessionaires then assume the losses related to claims covered by the retrocession contracts. If a retrocessionaire defaulted, or its financial situation deteriorated, SGLRI could lose part or all of the coverage provided by its retrocessionaire whereas it would retain its liability towards the cedent for the payment of all claims covered under the reinsurance contract.

SGLRI could also lose receivables from the defaulting retrocessionaire (receivables are due to a timing difference between statement accounts received and real payment due for positive balances of retrocessionaire accounts).

CREDIT RISK RELATED TO DEPOSITS WITH CEDENTS

SGLRI may be exposed to credit risk in relation to amounts deposited with ceding companies in respect of reinsurance reserves which cover its liabilities. However, depositing these amounts does not a priori discharge SGLRI of its liability towards the cedent in cases where it is not able to recover all or part of these amounts in the event of a cedent default or a deterioration in the financial situation of that cedent. Hence, it is, at least in principle, possible that SGLRI may remain liable for paying claims due under the reinsurance treaty without being able to offset all or part of the corresponding deposits.

A legal opinion was obtained in respect of those jurisdictions where it has deposited material amounts with cedents, to provide assurance that the contractual right of offset exists.

CREDIT RISK RELATED TO FUTURE CASH-FLOWS OF LIFE REINSURANCE TREATIES

Under most of its Life reinsurance contracts, SGLRI expects to receive premiums from its cedents over several years. These often exceed expected future payments for claims, commissions, etc., meaning that SGLRI expects to receive future positive cash flows.

Credit risk on future cash flows from Life reinsurance policies arises from two risk factors:

- the payment of future cash flows expected under Life reinsurance contracts requires that the cedent is financially sound. Therefore, SGLRI risks a reduction in the value of its portfolio of Life contracts in the event of a deterioration in the financial strength of the cedent;
- a reduction in the value of future cash flows could arise from material unexpected lapsation of policies following a deterioration of the cedent's credit rating or standing or an event which has a negative effect on the cedent's reputation.

CREDIT RISK RELATED TO CASH DEPOSITS AT BANKS

SGLRI is exposed to the risk of losing all or part of any cash deposited with banks in the event a bank is no longer able, due to insolvency, to honor its commitments (e.g. following liquidation). The current main risk for SGLRI is the significant concentration of deposits in a small number of banks. This risk is a direct result of the selection of the most stable banks.

C.4.2 MANAGEMENT OF CREDIT RISKS

Management of credit risk related to bond portfolios

SGLRI mitigates the credit risk related to bond portfolios by careful analysis and selection of issuers, by a policy of geographic sector diversification, and by setting up mitigation tools such as collateral, as in the case of the internal collateralized bond with SGLAH. SGLRI maintains its investment policy in high-quality assets and in countries with the lowest sovereign risk.

Exposure analyses are performed on a regular basis (sector, geographical area, counterparty and rating) and enables critical risks to be identified and evaluated in order to take appropriate actions.

Management of credit risk related to retroceded liabilities

SGLRI selects retrocessionaires carefully, taking into account their financial strength, and regularly monitors its exposure to retrocessionaires and provides summary reports to the Board Risk Committee on a regular basis.

Management of credit risk related to deposits with cedents

SGLRI favors deposit arrangements with the ability to offset liabilities against deposits with high legal certainty.

Deposits with cedents are monitored through a quarterly analysis of exposure and associated risks. Actions aiming at reducing or limiting the exposure (e.g. ad-hoc legal opinions, introduction of offset clauses) can be implemented where needed.

Management of credit risk related to future cash flows from Life reinsurance treaties

A substantial proportion of SGLRI's contracts are with SCOR affiliates. SGLRI monitors the development of its cedents' financial situation through regular contact, which enables SGLRI to take appropriate action when deemed necessary. In addition, credit risk on future cash flows from Life reinsurance policies is mitigated by industry-wide protection solutions in several countries.

Management of credit risk related to cash deposits at banks

SGLRI selects bank counterparties according to their rating and credit quality. Concentration risk from cash deposits at banks is mitigated by setting counterparty exposure limits. SGLRI takes into consideration the public assistance (e.g. loans, guarantees of deposits, nationalizations) which certain banks may benefit from during a financial crisis, as they are important in the economy of their respective country.

For further information on how risks related to invested assets are managed, see Section C.3 - Market risks.

C.5 Liquidity risks

C.5.1 OVERVIEW OF LIQUIDITY RISKS

Liquidity risk is the risk of not having sufficient financial resources available to meet obligations as they fall due, or only being able to secure them at excessive cost.

LIQUIDITY NEEDS

SGLRI needs liquidity to pay claims, operating expenses, interest payments and declared dividends on its share capital. Without sufficient liquidity, SGLRI may be forced to curtail its operations, and business will suffer. In the case of catastrophe claims, in particular, it may need to settle amounts which exceed the amount of available liquidity in a reduced timeframe.

Liquidity needs may also arise from increased collateral requirements. Some of the facilities that SCOR uses to grant letters of credit to cedents require 100% collateral from SCOR, for example in case of default (non-compliance with financial covenants, a significant decrease in the Group's financial strength rating ...), which would result in a deterioration of the Group's liquidity level. Also, cedents have the right to draw down on letters of credit issued by a bank in SCOR's name at any time, however the impact on their relationship with SCOR would be considered. The risk of this occurring would increase if cedents' concerns of SCOR not honoring its obligations increase. In a severe scenario for SCOR, multiple cedents could draw on letters of credit simultaneously, requiring SCOR to provide the total amount of required cash or fungible assets resulting in a liquidity strain for SCOR. Collateral arrangements, including the posting of assets or Letters of Credit, are used by SGLRI when the jurisdiction(s) in which it operates demand collateral or when clients demand collateral for risk mitigation purposes. Letters of Credit carry the risk of a duration mismatch i.e. that short-term

Letters of Credit are covering long-term business and might have to be renewed at less favorable conditions, creating additional cost.

SOURCES OF LIQUIDITY

The principal internal sources of SGLRI's liquidity are reinsurance premiums, cash flows from its investment portfolio and other assets, consisting mainly of cash or assets that are readily convertible into cash.

External sources of liquidity include bank overdraft facilities.

SCOR's, and SGLRI's, ability to access external sources of liquidity may be subject to adverse capital and credit market conditions.

Liquidity risks are increased when capital and credit markets experience extreme volatility or disruption, as SCOR may need to sell a significant portion of its assets quickly and on unfavorable terms, particularly if current internal resources do not satisfy its liquidity needs.

This risk may be increased due to the characteristics of certain assets held, whose liquidity may be limited due to contractual or regulatory constraints (e.g. investments in corporate, real estate or infrastructure loans).

C.5.2 MANAGEMENT OF LIQUIDITY RISKS

SGLRI assesses liquidity risks arising from both short-term and long-term liquidity needs. SGLRI manages these risks via different mechanisms which consider:

- actions to be taken by the insurance or reinsurance business areas to take into account both short-term and long-term liquidity risk; and
- the appropriateness of the composition of the assets in terms of their nature, duration and liquidity in order to meet the obligations as they fall due.

Short-term liquidity, or cash management, includes the day-to-day cash requirements under normal business conditions.

Liquidity considerations over the long-term need are assessed in a way which takes into consideration the possibility of various unexpected and potentially adverse business conditions where assets may not be sold for current market values. SGLRI estimates the level of its immediately tradeable assets (i.e. non-pledged assets) which could be sold within a reasonable timeframe.

C.5.3 EXPECTED PROFITS INCLUDED IN FUTURE PREMIUMS

SGLRI's expected profit in future premiums (EPIFP) as at year end 2020 amounts to USD 352 million. EPIFP results are produced by SCOR solely for the purposes of QRT reporting. They are not used for internal processes regarding capital management, the details of which are provided in Chapter E – Capital Management.

C.6 Operational risks

C.6.1 OVERVIEW OF OPERATIONAL RISKS

For quantitative information on operational risk, refer to Section E.2.1 – Solvency Capital Requirement.

Operational risks are inherent to all businesses including SGLRI's. Operational risks may be split into four main causes further described below: related to staff, systems or facilities, processes or external events.

RISKS RELATED TO STAFF

Risks related to staff can arise as follows:

- the failure to attract or retain key personnel or the loss of crucial information/skills concentrated in a single person, or of a whole team;
- incidents due to mistakes or non-compliance with instructions, guidelines or policies;
- internal staff mandated by SGLRI having authorized access to SGLRI's offices or systems taking advantage of SGLRI's assets for personal gain e.g. through the misappropriation of assets, tax evasion, intentional mismarking of positions or bribery;
- intentional damage to assets (including data) required by SGLRI to perform its operations by internal or external staff, which could lead to significant remediation costs (including these released to rebuilding databases or systems).

RISKS RELATED TO SYSTEMS OR FACILITIES

Risks related to systems or facilities can arise as follows:

- a malfunction or a major breakdown in IT systems, outages, disruptions due to viruses, attacks by hackers and thefts or data breaches. This can occur within SGLRI's own environment or to a third-party providing services or data to SGLRI;
- interruption of any IT systems leading to loss of data, delays in service or in a loss of efficiency of teams, which could lead to remediation costs, loss of contracts or damage to SCOR's reputation. In addition, these incidents could increase other operational risks such as external fraud or human error (e.g. delay in the recognition of adverse business development). The interruption of these systems could damage commercial activities including underwriting, pricing, reserving, premium and claims payment, commercial support, and asset management;
- in addition, the facilities in which SGLRI and outsourced providers operates might be impacted by natural or man-made perils. They could also be affected by legal or management decisions (e.g. due to pandemic or social conflict). The offices might need to be closed for a period of time potentially resulting in a loss of productivity and business opportunity, as well as remediation costs.

RISKS RELATED TO PROCESSES

SGLRI's risk management policies, procedures and controls may not be appropriate or sufficient. In particular, any additional workload to the planned activities could reduce the efficiency of some processes and controls. For example, the creation of a new entity, the development of a new line of business, or any other project, may lead to an accumulation of operational risks.

Some of SGLRI's processes are partially or fully outsourced both externally and to other entities within the SCOR Group. The failure of outsourced processes could lead to direct losses and other operational incidents.

Since SGLRI remains responsible for commitments or services contracted, including for outsourced activities, inappropriate client relationship management or an inadequate level of service and/or product quality provided by SGLRI to its clients or a breach of contract may lead to a loss of profitable business relationships.

In addition, SGLRI may be involved in legal and arbitration proceedings due to non-protective terms of a contract, denounced either by third parties or internally which could lead to an unfavorable outcome.

For further details on the main current regulatory developments which may have an impact on SGLRI, please refer to Section C.7.1.3 - Risks related to legal and regulatory developments.

RISKS RELATED TO EXTERNAL EVENTS

SGLRI may be exposed to an unfavorable business environment such as evolving or additional regulatory constraints potentially hindering its business model.

Legal and regulatory risk in SGLRI's operating environment

As a member of an international group, SGLRI must comply with national and international laws, regulations and applicable accounting standards. This includes all applicable economic sanctions, programs relating to anti-corruption, anti-money laundering, in addition to anti-terrorism laws, and laws and regulations applicable to its operations. Laws and regulations applicable to SGLRI's operations refer *inter alia* to the economic trade sanctions laws and regulations administered by the United States Department of the Treasury's Office of Foreign Assets Control (OFAC) and to certain laws administered by the United States Department of State. They also refer to applicable economic trade sanctions laws, regulations and directives of the European Union and its member states. Other international directives with which SGLRI complies apply to anti-money laundering, corruption, terrorism financing and insider trading. Regarding anti-corruption laws and regulations, SGLRI must comply with, amongst others, the Foreign Corrupt Practices Act (FCPA) and other laws such as the UK Bribery Act. Additionally, SGLRI must comply with regulatory requirements regarding data management (both SGLRI's data and that of its clients), in particular the General Data Protection Regulation (GDPR) enacted by the European Union.

The level of legal, regulatory, tax or accounting requirements depends on several factors including the type of business (e.g. primary insurance or reinsurance business), the location and the legal structure of SGLRI. The large number of different regulatory environments, in which SGLRI operates, as well as changes in present and future regulations increase the complexity and risks of the related processes. Any violation of laws, regulations or accounting requirements could potentially expose SGLRI to fines, class actions with compensation payments, account restatements or business restrictions and reputational damage.

SGLRI has implemented its Brexit contingency plan. This contingency plan involves certain run-off UK business previously written by SGLRI entering into the UK's Financial Services Contracts Regime ("FSCR"). The remainder of SGLRI's UK business is now structured on a non-admitted basis with operational restructuring already undertaken by the company to conform with the requirements of this approach.

Other risks related to external events

Risks related to external fraud

SGLRI is exposed to external fraud which is characterized by the theft of certain SGLRI assets by third parties. External frauds may be perpetrated by various means including cyber-attacks and usually target cash or data. Should an act of fraud succeed in bypassing the controls, or protection measures in place, this could generate a direct loss for SGLRI.

Risks related to cyber attacks

SGLRI is exposed to cyber-attacks which can be very diverse in their sophistication and execution. The main targets are system functions, data and cash management. Immediate repercussions include:

- systems could be slowed down, corrupted or stopped potentially resulting in loss of productivity, corrupted data and remediation costs;
- funds could be stolen through fraudulent wire transfers;
- data could be stolen, deleted or corrupted, or made public in contradiction with SGLRI's regulatory or contractual obligations.

Any of the above could generate significant damage to SCOR's systems or data, a reputational risk, give rise to a breach of SGLRI's legal responsibility, and may result in regulatory sanctions depending on the level of sensitivity of the data or system that is successfully attacked. The cyber-attack could also assist external fraudsters resulting in a financial loss.

C.6.2 MANAGEMENT OF OPERATIONAL RISKS

The two main principles driving the operational risk management approach are:

- exhaustiveness: ensure that a complete and exhaustive identification of all risks within SGLRI is carried out to the extent possible;
- proportionality: once operational risks are identified, management uses appropriate and proportionate responses, resources and procedures, focusing on key risks.

The process owners are responsible for managing operational risks within the processes. To meet high quality standards, SGLRI relies on a highly qualified staff to manage processes and the risks within these processes.

In order to support the staff, SCOR has developed Internal Control System (ICS) standards which SGLRI has locally adopted. According to the ICS standards, process owners should be in a position to identify the critical operational risks within the processes assigned to their area of responsibility. The process owners design, implement and operate appropriate key controls and maintain the net risk exposure at or below an acceptable level of possible damage.

SGLRI has also implemented regular risk reporting mechanisms in order to provide an overview of operational risks across the Company.

In addition, through its assignments, Group Internal Audit (GIA) contributes to the oversight of operational risk management.

Outsourcing some activities or processes may improve or streamline some aspects of a process, but SGLRI is still expected to deliver the same level of service. Principles to properly manage potential operational risks stemming from outsourcing of certain functions are set out in dedicated policies and guidelines.

On risks which may develop rapidly, such as external fraud, SGLRI adapts its risk management, for example by organising specific training programs and sending regular warnings and detailed instructions to its employees.

In relation to climate risk, the exposure of SGLRI and SCOR's operations to acute and chronic physical climate risks is principally managed through the Business Continuity Plan. In addition, SCOR manages the Carbon footprint generated by its direct operations by focusing on three main areas:

- environmental certification of office buildings;
- energy consumption management – using renewable energy sources where possible;
- voluntary offsetting of greenhouse gas emissions via initiatives such as afforestation projects.

For more information on SCOR's management of its Carbon footprint, refer to SCOR's 2020 Universal Registration Document, Section 06 "Non-Financial Performance Statement" – 6.4.3 "The Groups Operations".

C.7 Other material risks

C.7.1 STRATEGIC RISKS

Strategic risk can be defined as the risks related to losses arising from an unsuccessful strategy or objectives. Strategic risks can arise as a consequence of either the strategy itself (such as the accumulation of risks or development in lines of business or less known markets), from external risks (such as an adverse economic environment), or from internal risks (such as certain causes of operational risk). Therefore, many of the risks discussed throughout Chapter C - Risk profile, in addition to emerging risks, could also impact the success of the strategy.

The main strategic risks to which SGLRI is exposed are described below.

RISKS RELATED TO THE MACROECONOMIC ENVIRONMENT AFFECTING SCOR'S STRATEGY

The main risks are the uncertain economic environment due to the current Covid-19 pandemic that may affect SGLRI's growth in both emerging and advanced economies, and a drop in the returns on financial markets exacerbating the adverse competitive environment.

A deterioration of financial markets and the global economy will have significant implications for SGLRI's activities and results.

SGLRI's results could be significantly affected by the economic and financial situations particularly in the United States of America and the United Kingdom and elsewhere around the world. The threat of a global economic depression due to public health, cyclical and commercial reasons (e.g. the ongoing U.S – China trade war) remains, and a lasting macroeconomic deterioration could affect SGLRI's activities and results. The current low interest rate environment is reaching previously unknown levels and, in the event that interest rates rise, the current exceptional level of indebtedness would become a source of major financial instability. Current monetary policy seems to have reached a point where any additional easing would probably have little significant economic effect. These trends could result in financial markets experiencing a period of very high volatility, with consequences including waves of corporate bankruptcies and potentially sovereign defaults in vulnerable regions, a fall in the value of asset classes (bonds, equity and real estate), and even a major liquidity crisis.

In the absence of a quick and mass roll-out of vaccines against Covid-19 to the general population, the economic outlook remains negative. In addition, the current decline in the US economy, continuing economic disparities and imbalances between EU countries and political risks, could fuel further political and economic instabilities

Impact on SGLRI's Investment activities

SGLRI has a large investment portfolio. In the event of extreme prolonged market events, such as global credit crises, SGLRI could incur significant losses in its investment portfolio.

Even in the absence of a market downturn, SGLRI remains exposed to a substantial risk of losses due to market volatility.

Impact on SGLRI's reinsurance business

SGLRI is also dependent on customer behavior and premium growth. SGLRI's premiums could decline in the case of an unfavourable macroeconomic environment and its profit margins could erode. In an economic downturn, the demand for SGLRI's and its clients' products could be adversely affected. Factors such as government and consumer spending, corporate investment, the volatility and strength of both debt and equity markets, and inflation, all affect the business and economic environment and ultimately, the size and profitability of SGLRI's business. In addition, the ongoing low interest rate environment continues to stimulate the inflow of alternative capital and this has been contributing to the current soft market i.e. the reduction in (re)insurance premium rates.

SGLRI may also experience an elevated incidence of claims or be impacted by a decrease in demand for reinsurance and increased surrenders of policies from the cedents (see paragraph on lapse risk in Section C.2.1.4 – Policy behavior risks) that could affect the current and future profitability of its business. Although written premiums have seen steady growth in prior years, a prolonged economic crisis could result in lower written premiums in the future.

SGLRI is exposed to significant and protracted deviations of inflation from its trend

SGLRI's assets are also exposed to increased inflation or inflationary expectations, accompanied by a rise in the yield curve with a subsequent reduction in the market value of its fixed income portfolios. Increased inflation could also have a negative impact on the solvency of bond issuers; a widening of credit spreads would lead to a loss of value for the issuers' bonds.

Although the risk of inflation is less likely in the current macroeconomic environment, at least in the short term, the economy could experience a period of stagflation, combining a decline in activity with a surge in prices, following the current explosion of money creation and public debt. In this case, underwriting volume would also be negatively impacted, and with it the combined ratio, the net income and the net asset value of SGLRI.

The risk of deflation, defined as a fall in prices and usually associated with an economic slowdown, can also not be ruled out in the current environment, characterised by the imminent risk of depression and lack of room for manoeuvre in relation to economic policies.

In this case, underwriting volume would also be negatively impacted, and with it the combined ratio, the net income and the net asset value of SGLRI. In conclusion, both high inflation and a protracted episode of deflation could have a material adverse effect on SGLRI.

Management of risks related to the macro-economic environment

These risks are monitored via regular risk reporting mechanisms to the Board Risk Committee, including complementary risk analyses on ad-hoc topics, where deemed necessary. Potential impacts on SGLRI's risk profile are managed through a variety of dedicated and transversal risk management mechanisms.

RISKS RELATED TO THE COMPETITIVE ENVIRONMENT

SGLRI, as a member of SCOR Group operates in a highly competitive sector and would be adversely affected by losing competitive advantage or if adverse events had an impact on the reinsurance industry.

Reinsurance is a highly competitive sector. As is the case for all other reinsurers, SCOR's position in the reinsurance market is based on several factors, such as its financial strength as perceived by the rating agencies, its underwriting expertise, its reputation and experience in the lines written, the countries in which it operates, the premiums charged, as well as the quality of the proposed reinsurance products and services offered, particularly in terms of claims settlement and payment. The Group competes for business in the European, American, Asian and other international markets with numerous international and domestic reinsurance companies, some of which have a larger market share than SCOR, greater financial resources, state backing, and, in certain cases, higher ratings from the rating agencies.

Therefore, SCOR remains exposed to the risk of losing its competitive advantage. In particular, when available reinsurance capacity, via traditional reinsurers or capital markets, is greater than the demand from ceding companies. Its competitors, in particular (re)insurers benefiting from higher ratings than SCOR's or other competitors in alternative capital markets, may be better positioned to enter new contracts and gain market share at SCOR's expense. Furthermore, competitors are currently promoting innovation, impacting all areas of the business, in addition to its products and services, and the underlying risks. While innovation is also an important part of SCOR's strategy, if competitors are quicker at integrating innovative solutions into their business, products and services, or make choices which have a bigger impact on future reinsurance trends, SCOR might lose its competitive advantage.

Finally, the Group's reputation is sensitive to reinsurance sector information. It can be affected by adverse events concerning competitors but also by its own business activity, such as financial difficulties following a major market event. Loss of reputation due to internal risks would also weaken SCOR's competitive position.

Consolidation in the insurance and reinsurance industries could adversely impact SGLRI

There has been no significant M&A activity in 2020, but challenging business conditions, sub-par performance of some players, the continued convergence of alternative and traditional capital, the impact of Covid-19, as well as other challenges, are expected to lead to further mergers in the next few years.

Within the reinsurance industry, such external growth activity could potentially enhance these players' competitive position, e.g. in terms of being able to offer greater capacity or broader product offerings, which could permit them to gain market share at SGLRI's expense.

Management of risks related to the competitive environment

As for risks related to the macro-economic environment, risks related to the competitive environment are monitored via a robust strategic planning approach and regular risk reporting mechanisms to the Board Risk Committee, including complementary risk analyses on ad-hoc topics, where deemed necessary. For further information on risk reporting mechanisms, refer to Section B.3 - Risk management system including the ORSA and Section B.1.3 – Group Governance structure at Group and legal entity level.

RISK RELATED TO LEGAL AND REGULATORY DEVELOPMENTS

Main risks related to legal and regulatory developments

SGLRI is subject to comprehensive and detailed regulations and to the supervision of insurance and reinsurance competent authorities. Insurance and reinsurance supervisory authorities have broad administrative powers over many aspects of the reinsurance industry and SGLRI cannot predict the timing or form of any future regulatory initiatives.

Regulatory uncertainties stem from Brexit, future implementation of the US and EU Covered Agreement and protectionist trends as well as ongoing Solvency II reviews. As the Covid-19 crisis unfolds, other regulatory uncertainties also stem from the potential set-up of public/private "pandemic pools" for business interruption coverage.

EIOPA Solvency II reviews could lead to additional requirements for insurance and reinsurance undertakings. The Covid-19 crisis will likely increase risks for the Solvency II review with the regulatory impetus on systemic regulation, including

recovery and liquidity planning. Restrictions on dividends could be extended. Similarly, changes in tax legislation and regulations, or in their interpretation, may have a negative impact on SGLRI's performance, including financial results and business model.

Additionally, SGLRI's strategy might be impacted by future legal or regulatory developments related to climate change. Tighter regulatory controls and/or government legislation to significantly curb carbon emissions may place restrictions on the business that SGLRI can underwrite.

Other legal and regulatory developments

The reinsurance sector has been exposed in the past, and may be exposed in the future, to involvement in legal proceedings, regulatory inquiries and actions by various administrative and regulatory authorities, as well as to regulation concerning certain practices used in the insurance sector.

More generally, adverse changes in laws or regulations or an adverse outcome of any legal proceeding could have an adverse impact on SGLRI. For further information on risks related to current legislation and regulations and their impact on SGLRI's operations, see Section C.6.1.4 - Legal and regulatory risks in SGLRI's operating environment.

Management of risks related to legal and regulatory developments

SGLRI monitors the legal and regulatory developments which could have an impact on SGLRI, ensuring in particular that it takes an active position regarding the requirements to which it is exposed or could be exposed in the different jurisdictions where it operates and that it prepares in due time for their implementation.

In addition, developments in existing or emerging prudential regulations (such as Solvency II, ComFrame or systemic risk regulations) are monitored at Group level by the Prudential and Regulatory Affairs department. Regulations relating to corporate law and business compliance are monitored by the General Secretariat and, within it, the Legal department. SGLRI benefits from these monitoring activities at Group level.

DOWNGRADE RISK

Overview of SCOR's downgrade risk

Credit ratings are very important to all reinsurance companies, including SCOR, as ceding companies wish to reinsure their risks with companies having a satisfactory financial position. For more details on the current rating of the Group, refer to SCOR 2020 Universal Registration Document, Section 1.2.4 - Ratings Information. Due to parental support, the rating of SGLRI is aligned with that of the Group. Therefore, the downgrade risk of SGLRI is equivalent to the downgrade risk on SCOR's group.

Impact on SGLRI's reinsurance business

Some of SCOR's cedents' credit models or reinsurance guidelines face regulatory capital requirements or depend on their reinsurers' credit rating. If SCOR's rating deteriorates, cedents could be forced to increase their capital requirements in respect of their counterparty risk on SCOR. This could lead to a loss of competitive advantage for SCOR.

Consequently, SGLRI's Life reinsurance activities are sensitive to the way its existing and prospective clients perceive its financial strength notably through its ratings.

Many of SGLRI's reinsurance treaties, notably in the US, and also increasingly in Europe, contain clauses concerning the financial strength of SCOR, and provide for the possibility of early termination for its cedents if the rating of SCOR Group is downgraded. Early termination may also occur when the net financial position of SCOR falls below a certain threshold, or if it carries out a reduction in share capital.

Impact on the SGLRI's letters of credit

Many of the SGLRI's reinsurance treaties contain a requirement to put in place letters of credit (LOC) as a general requirement or when triggered by a downgrade of SCOR or one of its subsidiaries. In certain circumstances, the cedent has the right to draw down on a LOC issued by a bank in SCOR's name.

In the case of a large number of LOCs being drawn simultaneously, SGLRI could encounter difficulties in providing the total amount of required cash or fungible assets, i.e. exposing itself to a liquidity risk.

Moreover, some of SGLRI's facilities contain conditions about its financial situation which, if not met, constitute a default and might result in the suspension of the use of current credit facilities and/or a prohibition on obtaining new lines of credit or result in the need to negotiate new LOC facilities under adverse conditions.

For more details on liquidity risks, refer to Section C.5 - Liquidity risks.

Impact on capital resources

A significant multiple-notch downgrade of the Group could negatively impact the ability of SGLRI to generate new business or retain in-force business (potentially leading to a reduction in eligible own funds due to a reduction in expected future cash flows under existing reinsurance treaties e.g. Life business).

Management of downgrade risk

SCOR's current ratings are at the highest levels within the reinsurance sector. It is currently rated by Standard & Poor's and Fitch at "AA-/Stable", by Moody's at "Aa3/Negative" and by AM Best at "A+/Stable". Therefore, a downgrade by one notch would have a limited impact on its future business development, its liquidity position or its capacity to raise funds. For further information on SCOR's current rating, see Section 1.2.4 Ratings Information. SGLRI has a Standard & Poor's rating of AA- and a Fitch rating of AA-.

SCOR monitors its ratings assigned by the top four rating agencies via a dedicated team placed under the supervision of the Group CFO.

This team analyses rating agencies' methodologies, reports published on the reinsurance market, on SCOR and on its main competitors, in order to anticipate any potential rating actions. It also monitors specific qualitative and quantitative Key Performance Indicators developed by the four main rating agencies and performs analyses of selected deterministic scenarios. The team also monitors the capital adequacy level as measured by the capital models developed by rating agencies.

OTHER STRATEGIC RISKS

SGLRI may be exposed to other less significant strategic risks described below.

Risks related to capital

Overview of risks related to capital

Adverse capital and credit market conditions may significantly affect SGLRI's ability to access capital and/or liquidity or increase the cost of capital.

Disruptions, uncertainty or volatility in the capital and credit markets may also limit SGLRI's access to capital required to operate its business, most significantly its insurance operations.

For further information on Risks related to the macro-economic environment that could impact SGLRI, refer to Section C.7.1.1. – Risks related to the macroeconomic environment affecting SCOR's strategy.

Management of risks related to capital

SGLRI's ability to access capital is facilitated through the Group. However, as a legal entity, it may be exposed to the risk of increased local regulatory constraints. Within SGLRI, the capital position is monitored each quarter and if necessary action is taken to keep the solvency ratio above the monitor level as defined in its Risk Appetite Statement.

For further information on capital management, refer to Chapter E – Capital Management.

Risks related to cashflow

AEGON's insolvency might impair the value of future cash-flows of SCOR Global Life reinsurance treaties.

The majority of SGLRI's US mortality reinsurance business relates to business flows into SGLRI via retrocession from AEGON companies. Therefore, an AEGON insolvency might reduce or terminate cedent premiums passed on to SCOR, impair future cash-flows and could have a material adverse effect on SGLRI.

C.7.2 SIGNIFICANT RISK CONCENTRATIONS

Risk concentrations mainly impact three categories of risk, individually or collectively:

- Underwriting risks, in particular through mortality risk and other accumulation risks across lines of business or within certain geographical areas. For further information on SGLRI's exposure to mortality risk and how these and other risks are managed, see Section C.2.1 – Life reinsurance.
- Market risks, in particular in case of major events impacting specific types of assets to which SGLRI is exposed. For further information on market risks and how they are managed, see Section C.3 – Market risks.
- Credit risk, in case of major events impacting certain types of counterparties or certain individual counterparties to which SGLRI is exposed. For further information on credit risks and how they are managed, see Section C.4 – Credit risks.

For further information on the accumulation of risks within SGLRI and how these risks are managed, see Section B.3.2.3 – Identification and assessment of risks.

C.8 Any other information

Not applicable to SGLRI.

D. VALUATION FOR SOLVENCY PURPOSES

Solvency II requires SGLRI to produce an economic balance sheet (subsequently referred to as EBS) representing a market view of its assets and liabilities as at the reporting date. The Solvency II regulations require the EBS to include assets valued at the amount for which they could be exchanged between knowledgeable willing parties in an arm's length transaction and liabilities valued at the amount for which they could be transferred, or settled, between knowledgeable willing parties in an arm's length transaction. In addition, liabilities are not adjusted to take account of the credit standing of the reporting entity.

The details of the valuation principles applied in the EBS, including the differences between the valuation principles and those applied in the financial statements, are outlined in this chapter.

In the EBS, both assets and liabilities relating to in-force business are recognized at market-consistent values which constitutes the valuation for solvency purposes. SGLRI's EBS as at December 31, 2020 has been prepared based on the assumption that SGLRI will continue as a going concern, in line with the preparation of the financial statements. SGLRI prepares its financial statements in accordance with International Financial Reporting Standards (IFRS).

The preparation of the EBS requires management to make certain judgments, assumptions and estimates. These affect the reported amounts of assets and liabilities and the additional disclosures. Management reviews these estimates and assumptions periodically, based on past experience and other factors. The actual outcome and results could differ substantially from estimates and assumptions made. The most material financial statement line items for which SGLRI uses estimates and assumptions are reinsurance reserves, receivables and liabilities relating to reinsurance operations and the fair value and impairment of financial instruments and deferred taxes.

The EBS for SGLRI is presented in Quantitative Reporting Template S.02.01 (see Appendix A). The relevant extracts of the EBS are included at the beginning of each section together with a clear reference to the relevant sections within this chapter explaining the valuation bases and methods used for Solvency II purposes.

D.1 Assets

The table below presents the assets of SGLRI as per the EBS together with references to the relevant sections within this chapter explaining the valuation basis and methods used for Solvency II purposes.

SGLRI Assets as at December 31, 2020 in USD thousands	EBS Solvency II	Sections
Property, plant and equipment held for own use	1,785	D.1.1
Investments	3,838,446	
Participations and related undertakings	3,375,954	D.1.2
Bonds	453,527	D.1.3
Derivatives	8,955	D.1.3
Deposits other than cash equivalents	10	D.1.3
Reinsurance recoverables	191	D.1.4
Life and Health similar to Life, excluding Health and index-linked and unit-linked	191	
Life excluding Health and index-linked and unit-linked	191	
Deposits to cedents	1,576,312	D.1.4
Insurance and intermediaries receivables	14,264	D.1.4
Reinsurance receivables	10,935	D.1.4
Receivables (trade, not insurance)	7,737	D.1.5
Cash and cash equivalents	85,707	D.1.3
Any other assets, not elsewhere shown	6,422	D.1.5
TOTAL ASSETS	5,541,799	

D.1.1 PROPERTY, PLANT AND EQUIPMENT

Valuation for solvency purposes

Property, plant and equipment (referred to as property) is distinguished in the EBS between property held for own use by SGLRI and property other than for own use (investment property).

Property held for own use primarily relates to office furniture, equipment, leasehold improvements and right-of-use assets. SGLRI does not hold any direct investment in property.

As of January 1, 2019, SGLRI has applied IFRS 16 – Leases (please refer to the Note 2 – Accounting Policies in the 2020 Financial Statements) that requires the recognition of a lease liability reflecting the present value of future lease payments

and a 'right-of-use asset' for lease contracts on the balance sheet. Right-of-use assets are included in the balance sheet line item Property, plant and equipment held for own use. Lease liabilities are included on the EBS item Financial Liabilities. Depreciation of the right-of use assets and interest expense on the lease liability in accordance with the effective interest rate method are recognized in the income statement.

Comparison with the valuation in the financial statements

Property held by SGLRI is carried in the financial statements at cost, net of accumulated depreciation and impairment losses. There are no valuation differences between the EBS and the financial statements.

For further details on IFRS balances and valuation methods applied to property, please refer to the following notes in the 2020 Financial Statements: Note 2 - Accounting policies and Note 13 - Tangible assets.

D.1.2 PARTICIPATIONS AND RELATED UNDERTAKINGS

The participations value in the EBS represents SGLRI's share in SCOR Life Ireland dac.

Valuation for solvency purposes

For the purpose of the EBS, SGLRI values its holding in SLI using the adjusted equity method. The value of the participation reflects SGLRI's share of the excess of assets over liabilities of the related undertaking valued in accordance with Solvency II rules.

Comparison with the valuation in the financial statements

The participation is recognized in the financial statements of SGLRI at acquisition cost. The difference between the EBS and the statutory value is therefore driven by the revaluation, as explained above.

SCOR Life Ireland dac has published its own Solvency and Financial Condition Report. Please refer to SLI's SFCR and Note 12 - Investment in subsidiary in the 2020 Financial Statements for more information.

D.1.3 CASH AND INVESTMENTS, OTHER THAN PARTICIPATIONS

SGLRI in USD thousands	As at December 31, 2020		
	EBS	Statutory IFRS	Difference
Bonds	453,527	453,527	-
Derivatives	8,955	8,955	-
Deposits other than cash equivalents	10	-	10
Cash	85,707	83,554	2,153
Total investments and cash	548,199	546,036	2,163

Valuation for solvency purposes

Investments in the EBS include financial assets such as bonds (corporate bonds, government bonds and collateralised securities), derivatives and cash. SGLRI does not hold any assets in index-linked or unit-linked funds.

The economic value of financial assets that are traded in an active financial market is determined by reference to quoted market bid prices, at the close of business on the reporting date. Quotations are considered as active market prices if the quoted prices or rates represent actual and regularly occurring transactions that are available from a stock exchange, dealer or broker.

Financial assets valued using quoted prices comprise corporate bonds and government bonds. For collateralised securities the values are based on models prepared by internal and external experts using observable market inputs. For derivative financial instruments, fair value is determined by reference to either published bid values, or values based on models prepared by internal and external experts using observable market inputs.

If quoted prices in active markets for identical assets or liabilities are not available, the following valuation methods may be used:

- quoted market prices in active markets for similar assets, with adjustments to reflect specific factors (including the condition or location of the asset or volume or level of activity in the markets within which the inputs are observed);
- other models based on market inputs; and
- models using inputs which are not based on observable market data.

Bonds (government, corporate and collateralised securities)

SGLRI's investments in bonds comprise government bonds, corporate bonds and collateralised securities. SGLRI's investments in government and corporate bonds are all traded in an active financial market and so the value is determined by reference to quoted market bid prices, at the close of business on the reporting date. Collateralised securities are valued based on amortised cost.

Derivatives (assets and liabilities)

Derivative instruments are carried as assets when the economic values are positive and as liabilities when the economic values are negative.

SGLRI uses derivative financial instruments such as forward currency contracts and currency swaps to hedge its foreign currency risks. Such derivative financial instruments are initially recognized at economic value on the date on which a derivative contract is entered into and are subsequently remeasured at economic value.

Cash and cash equivalents (including deposits other than cash equivalents)

SGLRI applies the same definition of cash for both IFRS and Solvency II reporting purposes, which means that cash and cash equivalents (including deposits other than cash equivalents) includes cash, net bank balances and short-term deposits or investments which have maturity less than three months at the reporting date.

Comparison with the valuation in the financial statements

There are no valuation differences between the EBS and the financial statements. The reclassifications between investment categories result from the difference between the Solvency II definitions and those used in the financial statements.

For further details on IFRS balances and valuation methods applied to investments, please refer to the following notes in the 2020 Financial Statements: Note 2 - Accounting policies, Note 14 - Financial instruments (excluding derivatives), Note 17 - Derivative financial instruments and Note 23 - Cash and cash equivalents.

D.1.4 INSURANCE TECHNICAL ASSETS

SGLRI in USD thousands	As at December 31, 2020		
	EBS	Statutory IFRS	Difference
Deferred acquisition costs (DAC)	-	257,816	(257,816)
Reinsurance recoverables	191	(3,572)	3,763
Deposits to cedents	1,576,312	1,264,975	311,337
Insurance and intermediaries receivables	14,264	541,201	(526,937)
Reinsurance receivables	10,935	10,935	-
Total insurance technical assets	1,601,702	2,071,355	(469,653)

Valuation for solvency purposes

Insurance technical assets are balances that relate to insurance and reinsurance contracts.

In the EBS, assumed and ceded technical provisions are recognized in line with Solvency II methodology (see Section D.2 - Technical provisions). The calculation of Solvency II best estimate liabilities considers all cash flow projections related to existing insurance and reinsurance contracts, including premium, benefit and expense payments. As a result, some balances that exist in the IFRS balance sheet are either cancelled or adjusted on transition to the EBS, as follows:

DAC

DAC which represents the deferral of costs directly associated with the acquisition of new contracts (mainly commission) is not recognized in the EBS. Reimbursements of initial incurred acquisition costs are included in future premiums and thus included in the calculation of technical provisions.

Reinsurance recoverables

Reinsurance recoverables (ceded technical provisions) reflect the estimated amounts which are recoverable under reinsurance contracts (retrocession) in respect of SGLRI's reinsurance treaties.

Reinsurance recoverables in the EBS are calculated using essentially the same methodology, systems and processes as the best estimate liabilities (see section D.2 - Technical provisions). Assumptions are set based on the type of business retroceded and the valuation takes into consideration the recoverability of the balance, where appropriate.

Deposits to cedents

These balances represent deposits made at the request of ceding companies as collateral for SGLRI's reinsurance commitments.

Under IFRS, deposits to cedents are valued based on the fair value of the underlying collateral posted in accordance with the terms of each reinsurance contract. In the EBS, the IFRS value of deposits to cedents is adjusted to a revaluation of the funds by discounting the future cash flows.

The calculation of these cash flows is based on the characteristics of the underlying contracts, thus creating two different categories of deposits for SGLRI:

- Deposits with a contractual fixed and guaranteed return rate: SGLRI calculates the market value of this category of deposit as the IFRS value plus a market value adjustment (MVA). The MVA for these deposits is derived from the discounted value of projected cash flows in respect of the deposited reserves. The calculation of cash flows related to deposits reflects the characteristics of the underlying contract, in particular the reimbursement of interest thereon. As for best estimate liabilities, these are discounted with risk-free interest rates aligned to those published by EIOPA.
- Deposits with a variable return rate depending on a specified portfolio of assets: the fair value of the deposits is the market value of the underlying assets.

Insurance, intermediaries and reinsurance receivables

Insurance and intermediaries receivable balances included separately in the EBS represent amounts linked to reinsurance business that are due (and overdue) from cedents, but that are not included in the projected cash flows used for the calculation of technical provisions.

Reinsurance receivables are amounts linked to reinsurance (retrocession) due (and overdue) from reinsurers which are not included in reinsurance recoverables. The receivables include amounts due from reinsurers relating to settled claims. Receivables are carried at cost (with allowance for recoverability, if appropriate) as it is a good approximation of their market value.

Comparison with the valuation in the financial statements

As explained above, technical cash flows are taken into account within the Solvency II best estimate liabilities. As a result, acquisition costs and insurance receivables that are included in the projected cash flows used for the calculation of technical provisions are not recognized separately in the EBS.

Adjustments to the value of deposits to cedents are calculated consistently with the adjustments to best estimate liabilities. Insurance and intermediaries receivables include a reclassification of assumed outstanding claims estimates from IFRS Life contract liabilities, as these are not included in Solvency II technical provisions.

Reinsurance recoverables and receivables includes a reclassification of outstanding claims from IFRS contract liabilities as these are not included in Solvency II technical provisions.

For the remaining insurance technical assets, the valuation method applied in the Solvency II EBS does not differ from IFRS.

For further details on IFRS valuation methods and balances applied to insurance technical assets, please refer to the following notes in the 2020 Financial Statements: Note 2 - Accounting policies, Note 15 - Funds withheld and accrued interest, Note 18 - Net technical reserves, Note 20 - Assumed reinsurance accounts receivable, Note 21 - Accounts receivables from ceded reinsurance and Note 22 - Deferred expenses.

D.1.5 OTHER ASSETS

This section covers all other assets recognized in the EBS, including trade receivables and any other assets.

Valuation for solvency purposes

Trade receivables include amounts receivable from various business partners, the State (for example Irish tax authorities) and others that are not insurance or reinsurance related.

Comparison with the valuation in the financial statements

Other assets are carried at a value that is not materially different from market value and there are small valuation differences between IFRS and the EBS mainly due to timing.

D.2 Technical Provisions

SGLRI's technical provisions are calculated as the sum of best estimate liabilities (BEL) and risk margin (RM). BEL is valued as the net present value of future cash-flows. SGLRI determines the risk margin under Solvency II according to the specified cost-of-capital method, using the risk-free rate for discounting and the cost of capital rate. In order to estimate future SCRs, SGLRI uses the SCOR internal model. Consistent with the prescribed transfer scenarios for the RM calculation, the future SCRs capture underwriting, credit and operational risks.

The calculated risk margin is then allocated to underlying lines of business.

This chapter provides an overview of the Technical Provisions at year end 2020. In addition, the bases, methods and assumptions used for the calculations are described including an analysis of significant simplifications and the related uncertainties. Where deemed appropriate, the valuation of deposits to cedents and from retrocessionaires are commented on as they are closely linked to the BEL calculation.

The risk-free interest rates used are those provided by EIOPA. For some minor currencies, no risk-free rate is provided by EIOPA, and SCOR derives risk free rates using the methodology specified by EIOPA. Unadjusted risk-free rates are used with no transitional or long-term guarantee measures (e.g. volatility adjustments).

The table below presents the Life Technical Provisions of SGLRI.

SGLRI As at December 31, 2020 in USD thousands	EBS
Life technical provisions	1,569,091
TPs – Health SLT	26,535
<i>Best estimate</i>	(112,882)
<i>Risk margin</i>	139,418
TPs – Life (excl. Health and unit linked)	1,542,555
<i>Best estimate</i>	1,113,684
<i>Risk margin</i>	428,871
Life reinsurance recoverables	(191)
Health SLT	-
Life (excl. Health and unit linked)	(191)
Net Life technical provisions	1,568,900

D.2.1 SEGMENTATION BY LINES OF BUSINESS

Life Technical Provisions are segmented in the SGLRI EBS into life (excl. health and unit-linked) and health similar to life (SLT). These correspond to the assumed reinsurance life and assumed reinsurance health lines of business as required under Solvency II.

SGLRI As at December 31, 2020 in USD thousands	Best estimate liabilities (BEL)	Reinsurance recoverables	Risk margin	Total net technical provisions
Reinsurance Life	1,113,684	(191)	428,871	1,542,364
Reinsurance Health	(112,882)	-	139,418	26,535
Total net Life provisions	1,000,802	(191)	568,289	1,568,900

D.2.2 BEST ESTIMATE LIABILITY

The BEL is calculated as the net present value of future cash flows in respect of assumed reinsurance contracts (i.e. gross of retrocession), projected deterministically using best estimate assumptions. Amounts recoverable from reinsurance contracts are projected separately and follow the same valuation methodology as the BEL.

The cash flows considered for the BEL cover all liability cash flows related to premiums, benefits and expenses including the time value of options and guarantees. In general, cash flows are projected using actuarial valuation models that reflect the specific contractual conditions.

Actuarial bases and methodologies

Cash flows are projected using SGLRI's best estimate assumptions. For the vast majority of SGLRI's exposure, projections are based on recent data of individual policyholders reinsured under the reinsurance contracts, with modelling either at an individual policyholder level (seriatim models) or based on aggregated model points derived from individual policyholder data.

The term of the projection usually corresponds to the projected run-off of the block of business until natural expiry of the policies (subject to contract boundaries), or 65 years if shorter.

All technical cash flows arising from the reinsurance contracts are projected with an allowance for relevant expenses.

Cash flows are generally calculated and reported in the relevant original currency, with some minor exposures mapped to similar currencies and discounted at the assumed risk-free rate for the relevant currency.

Best estimate assumptions

The main categories for best estimate assumptions are related to biometric risks, policyholder behavioral risks, expenses associated with the management of reinsurance contracts including investment management expenses and economic assumptions. Assumptions are regularly reviewed and updated, where appropriate, based on the best available information at the date of valuation, including both internal and publicly available information. The information and data used to set assumptions for material portfolios is re-evaluated annually. Assumptions are derived by actuarial modelling teams and relevant experts and are subject to independent internal and external reviews.

The main biometric assumptions are for mortality (e.g. mortality rates, mortality improvement, impact of selection and anti-selection), morbidity (e.g. claims incidence rates, recovery rates) and longevity.

Policyholder behavior is modelled by the use of assumptions related to lapse, surrender and premium payment patterns.

SGLRI's total actual expenses are subdivided between maintenance, covering administrative and claims management expenses, acquisition, investment and one-off expenses based on the related activities. Projected cash flows include projected maintenance expenses, with an allowance for future inflation, and projected investment expenses.

Collateral costs are projected using assumptions based on the characteristics of the relevant collateral.

Economic assumptions (inflation rates, exchange rates, interest rates, implied volatility rates) have been calibrated to the prices of relevant financial market instruments observable at the date of valuation.

Foreign exchange rates used at the valuation date are the same as IFRS closing rates, assuring consistency with the IFRS balance sheet, which forms the base for the EBS as of that date.

Comparison to prior period

Compared to last year, the main changes were from business transfers, updates to the UK mortality improvement assumptions and North Asia loss ratio assumptions, new business and economic impacts. Other changes were made to less material assumptions.

D.2.3 SIGNIFICANT SIMPLIFIED METHODS USED

SGLRI applies a number of simplifications in the methodology used to calculate certain cashflows within the Technical Provisions, such as the allowance for future actions on the part of SGLRI or its cedents and the use of a deterministic projection of future cashflows. SGLRI operates a process for estimating the impact of these simplifications. In addition, SGLRI has adopted simplified methods to quantify a range of potential impacts on the Technical Provisions from the uncertainty around recently-emerging experience, which reflect the mixture of lighter and heavier claim experience among difference subsets of SGLRI's population of insured lives. In both cases, SGLRI has taken account of the potential effects on the different components of the Technical Provisions and the interaction with the SCR. This work is validated in accordance with the system of governance applying to the full set of Technical Provision calculations; the processes have identified that individual components of these analyses may be material and have concluded that SGLRI's aggregate Technical Provisions are appropriate.

SGLRI uses simplified methods to value approximately 15% of its Life and Health portfolio, measured in terms of the present value of projected future claims. These simplified methods either rely on model policies which are not derived from recent seriatim policy data; or are purely based on the historic aggregate accounting data of a treaty, extrapolating existing accounting data history under a duration and run-off assumption; or are models with other simplifications. Adjustments may be made to better reflect treaty conditions.

D.2.4 LEVEL OF UNCERTAINTY - SENSITIVITIES

The key area of uncertainty associated with the value of the Technical Provisions arises from the setting of best estimate assumptions. Assumptions are therefore reviewed on a regular basis, updated based on the best available information and are subject to independent reviews. In particular, while some assumptions can be reliably observed from market information or derived from recent experience data, other assumptions must be set for periods far in the future and so must allow for the development of trends and external influences, or for exposures for which less experience data are available. In these cases, SGLRI applies expert judgement to enrich data, derive parameters for the forecast, and reduce uncertainty in estimations. SGLRI applies expert judgement within a framework to make sure that its application is proportionate to the quantity and quality of data available, and to its potential impact.

The sensitivity of the BEL to the best estimate assumptions is analyzed through sensitivity tests. Their impacts are described below.

Mortality sensitivity

The most significant set of parameters to determine SGLRI's Technical Provisions are those for the projection of current and future mortality rates. A deterioration of expected mortality would cause a significant increase in the technical provisions, as mortality risk is a core element of SGLRI's risk appetite.

Some reduction in technical provisions would be observable on the annuity business in the case of a mortality increase. However, this is less material compared to the potential impact from the mortality business for the comparable scenario.

Morbidity sensitivity

A deterioration of expected morbidity would significantly increase the SGLRI technical provisions. The impact would not be as severe as a comparable change to expected mortality, as the exposure of SGLRI's portfolio to morbidity risk is lower. SGLRI's exposure to morbidity risk has grown in recent years due to its Asian business.

Lapse sensitivity

Technical Provisions for SGLRI would increase and the market value of deposits would decrease with an increase in assumed future lapse rates. Lapse rates can change due to the influence of external factors.

Interest rate sensitivity

A parallel upward shift to the yield curve would reduce the overall SGLRI technical provisions. The impact would be partly offset by a decrease of the market value of deposits.

A parallel downward shift would cause the opposite impact.

The overall impacts can vary directionally from year to year.

D.2.4.1 REINSURANCE RECOVERABLES

SGLRI transfers part of its risks to retrocessionaires via retrocession programs. The reinsurance recoverables associated with these programs are calculated using the same methodology, systems and processes as the underlying BEL of assumed reinsurance treaties. Special purpose vehicles are not in place for SGLRI's life portfolio retroceded. The exposure to default risk on the retrocession recoverables is minor, as in most Life retrocessions, positive cash flows are expected to be ceded.

D.2.4.2 RISK MARGIN

The underwriting risk capital charge calculation applies an estimated runoff pattern to homogenous lines of business, or in some cases more granularly on individual perils.

From these profiles, the specified VaR threshold defines future capital requirements. Credit and operational risk capital charges are presumed to run off in proportion to the projected underwriting risk capital charge. SGLRI thereby derives the estimated future total capital requirement of the prescribed reference undertaking.

The calculated risk margin is then allocated to underlying lines of business. SGLRI allocates the calculated risk margin to the underlying lines of business in proportion to their contribution to SCR.

D.2.5 COMPARISON WITH VALUATION IN FINANCIAL STATEMENTS

This section presents the main differences between the Solvency II net technical balances and the corresponding statutory IFRS balances for SGLRI reported as at December 31, 2020, which are shown in the following table.

SGLRI As at December 31, 2020 in USD thousands	EBS	Statutory - IFRS	Difference
Net deferred acquisition costs	-	257,811	(257,811)
Net deposits	1,576,312	1,264,975	311,337
Reinsurance recoverables	191	(3,572)	3,763
(Re)insurance receivables / payables	(12,510)	519,047	(531,557)
Technical provisions / BEL	(1,000,802)	(2,261,647)	1,260,845
Risk margin	(568,289)	-	(568,289)
Total net Life technical balances	(5,098)	(223,386)	218,288

The analysis of valuation differences between economic valuation and IFRS in the table above considers BEL, risk margin and market value adjustment on deposits in comparison to the corresponding statutory IFRS amounts. A neutral element is the difference in (re)insurance receivables/payables, which represents a reclassification of IFRS technical provision component, which is not modelled in the BEL. As mentioned in section D.1.4 – Insurance technical assets, DAC (deferred acquisition costs) recognized in IFRS, are eliminated for the purpose of the EBS, as underlying cash-flow projections are already considered in best estimate liabilities and reinsurance recoverables.

In addition to the above for SGLRI, valuation differences are due to margins for prudence, both implicit and explicit, allowed for under IFRS but not under Solvency II, and also from differences:

- between best estimate and static non-economic assumptions;
- in interest rate assumptions;
- in allowance for specific fees;
- in allowances for internal administration expenses; and
- in the methodology for assessing the reserves;

of which the main sources of valuation difference are the methodology used and the difference in non-economic assumptions.

For further detail on the IFRS valuation method and balances, please refer to the following notes in the 2020 Financial Statements: Note 2 - Accounting policies, Note 15 - Funds withheld and accrued interest, Note 18 - Net technical reserves and Note 22 - Deferred expenses.

D.3 Other liabilities

The table below presents the liabilities of SGLRI as per the EBS together with references to the relevant sections within this chapter explaining the valuation bases and methods used for Solvency II purposes.

SGLRI Liabilities as at December 31, 2020 in USD thousands	EBS Solvency II	Sections
Technical provisions - Life (excluding index-linked and unit-linked)	1,569,091	D.2
Technical provisions - Health (similar to Life)	26,535	
Technical provisions - Life (excluding Health and index-linked and unit-linked)	1,542,555	
Deferred tax liabilities	36,461	D.3.2
Derivatives	1,564	D.3.3
Debts owed to credit institutions	2,163	D.3.3
Financial liabilities other than debts owed to credit institutions	171,598	D.3.4
Insurance and intermediaries payables	32,482	D.3.1
Reinsurance payables	5,226	D.3.1
Payables (trade, not insurance)	26,905	D.3.3
Any other liabilities, not elsewhere shown	9,304	D.3.3
TOTAL LIABILITIES	1,854,792	

D.3.1 INSURANCE TECHNICAL LIABILITIES

SGLRI in USD thousands	EBS	As at December 31, 2020	
		Statutory IFRS	Difference
Insurance and intermediaries payables	32,482	32,482	-
Reinsurance payables	5,226	6,185	(959)
Total insurance technical liabilities	37,708	38,667	(959)

Valuation for solvency purposes

Insurance technical liabilities are balances that are related to insurance and reinsurance contracts, other than technical provisions.

In the EBS, assumed and ceded technical provisions are recognized in line with Solvency II methodology (see section D.2 - Technical provisions). The calculation of the Solvency II best estimate liabilities and risk margin takes into account all cash flow projections related to existing insurance and reinsurance contracts, including premium, benefit and expense payments. As a result, some liability balances that exist in the IFRS balance sheet are adjusted on transition to the EBS.

Insurance, intermediaries and reinsurance payables

Most payables related to insurance and reinsurance contracts are taken into account in the net best estimate liabilities as Solvency II requires the transfer of future cash flows from (re)insurance receivables/payables to technical provisions.

The insurance and intermediaries payable balances included separately in the EBS represent amounts linked to insurance business which are due to cedents but that are not included in the cash flows of technical provisions.

The reinsurance payables are amounts linked to retrocession costs which have not yet been settled and therefore cash flows are still due to the reinsurer.

Payables are carried at amortized cost as it is a good approximation of their market value.

Comparison with the valuation in the financial statements

As explained above, technical cash flows that are taken into account in the Solvency II net best estimate liabilities are not recognized separately in the EBS. Reinsurance payables include a reclassification of ceded outstanding claims estimates from IFRS technical reserves, as these are not included in Solvency II technical provisions.

For the remaining insurance technical liabilities the valuation method applied in the Solvency II EBS does not differ from IFRS, however there are reclassifications between line items.

For further details on IFRS balances and valuation methods applied to insurance technical liabilities, please refer to the following notes in the 2020 Financial Statements: Note 2 - Accounting policies, Note 24 - Assumed reinsurance accounts payable and Note 25 - Accounts payable on ceded reinsurance transactions.

D.3.2 DEFERRED TAX LIABILITIES

SGLRI in USD thousands	As at December 31, 2020		
	EBS	Statutory IFRS	Difference
Net deferred tax liability	36,461	8,318	28,143

Valuation for solvency purposes and comparison with the valuation in the financial statements

Deferred taxes in the EBS are recognized using the balance sheet liability method for all temporary differences at the reporting date between the tax base of assets and liabilities and their carrying amount in the EBS.

The temporary differences primarily relate to the impact of Solvency II adjustments to bring IFRS figures to EBS market value. These adjustments result in an increase in net assets, therefore all deferred tax impacts arising from the recording of economic adjustments are reflected in the deferred tax liability.

The amount of deferred tax provided is based on the carrying amount of assets and liabilities, using tax rates enacted or substantively enacted at the Balance Sheet date. Deferred taxes are not discounted.

Deferred taxes retained on the EBS are recorded in accordance with IAS 12 Income Taxes.

Comparison with the valuation in the financial statements

Measurement of deferred taxes for the Solvency II EBS is generally consistent with IFRS, the difference being the fact that the deferred tax asset or liability is established based on the difference between the values ascribed to assets and liabilities recognized in the EBS and their values recognized for tax purposes (instead of the differences between the asset or liability carrying amount in the IFRS balance sheet and its tax base).

Deferred tax balances are adjusted for the impacts of the differences between the IFRS and Solvency II valuation bases – the main difference being driven by revaluation of technical balances. For the purpose of the EBS, the appropriate deferred tax effect of all adjustments between the IFRS balance sheet and EBS is recognized using the appropriate tax rate applicable to the adjustment.

For further details on IFRS balances and valuation methods applied to deferred taxes please refer to the following notes in the 2020 Financial Statements: Note 2 – Accounting policies and Note 19 – Tax receivable and payable.

D.3.3 FINANCIAL AND OTHER LIABILITIES

SGLRI in USD thousands	As at December 31, 2020		
	EBS	Statutory IFRS	Difference
Derivatives	1,564	1,564	-
Debts owed to credit institutions	2,163	-	2,163
Payables (trade, not insurance)	26,905	26,903	2
Any other liabilities, not elsewhere shown	9,304	9,309	(5)
Total financial and other liabilities	39,936	37,776	2,160

Valuation for solvency purposes**Financial liabilities**

Financial liabilities in the EBS include derivatives and debts owed to credit institutions (incl. overdrafts). Derivative instruments are carried as liabilities when the economic values are negative. Derivatives are valued based on quoted market prices. For more information on derivatives please refer to section D.1.3 Cash and investments other than participations.

Other liabilities including trade payables

This section covers all other liabilities recognized in the EBS, including trade payables and any other liabilities.

Trade payables include amounts due to various business partners, employees, the State (for example Irish tax authorities) and others that are not insurance or reinsurance related.

Any other liabilities primarily include accruals. Trade and other liabilities are carried at amortized cost as it is a good approximation of their market value.

Comparison with the valuation in the financial statements

The reclassification between investment categories for debts owed to credit institution result from the difference between the Solvency II definitions and those used in the financial statements.

Other liabilities (including trade payables) are carried at their fair value for IFRS. The difference between the value of trade payables in the EBS and the financial statements is attributable to reclassifications between line items and timing differences.

For further details on IFRS balances and the valuation methods applied to financial and other liabilities, please refer to the following note in the 2020 Financial Statements: Note 2 - Accounting policies, Note 17 - Derivative financial instruments and Note 26 - Other liabilities.

D.3.4 FINANCIAL LIABILITIES OTHER THAN DEBTS OWED TO CREDIT INSTITUTIONS

Valuation for solvency purposes

Financial liabilities, other than debts owed to credit institutions in the EBS, consist of a loan principal from a related party Scor Switzerland AG. SGLRI initially recognises its financial liabilities at fair value less directly attributable transaction costs and subsequently measures at amortised cost using the effective interest rate method. Other financial liabilities, other than debts owed to credit institutions in the EBS, include lease liabilities. Lease liabilities are recognized under financial liabilities following the first time application of the IFRS 16 standard on lease contracts (please refer to Note 2 – Accounting policies in the 2020 Financial Statements).

Comparison with the valuation in the financial statements

The valuation method applied to financial liabilities other than debts owed to credit institutions in the Solvency II EBS does not differ from IFRS.

For further details on the IFRS balance and valuation methods applied please refer to the following notes in the 2020 Financial Statements: Note 2 – Accounting Policies, Note 16 – Financial liabilities and Note 26 – Other liabilities.

D.4 Alternative methods of valuation

As noted in sections D.1 - Assets and D.3 - Other liabilities, in certain circumstances for some assets and liabilities, SGLRI uses alternative valuation methods (including models) to estimate the market value. These methods are applied where the valuation is not possible using the default method (valuation based on quoted prices in active markets for the same assets or liabilities) or using quoted market prices in active markets for similar assets and liabilities with adjustments to allow for the specific differences. All valuation methodologies applied by SGLRI are explained within relevant sections in chapters D.1 - Assets and D.3 - Other liabilities.

D.5 Any other information

No other material information was identified by SGLRI over the reporting period other than valuation of assets and liabilities presented in sections D.1 - Assets to D.4 - Alternative methods for valuation.

E. CAPITAL MANAGEMENT

This section provides an overview of the year end 2020 capital position for SGLRI.

The table below includes the key results as at December 31, 2020 and December 31, 2019, respectively.

SGLRI in USD thousands	As at December 31, 2020	As at December 31, 2019	Variance
Eligible Own Funds (EOF)	3,687,007	4,003,860	(316,853)
Solvency Capital Requirement (SCR)	1,915,120	1,622,334	292,786
Excess Capital (EOF - SCR)	1,771,887	2,381,526	(609,639)
Solvency ratio	193%	247%	-54%

E.1 Own funds

E.1.1 OWN FUNDS

For more information on own funds please also refer to Quantitative Reporting Template S.23.01.01 – Own funds, presented in Appendix A.

E.1.1.1 OWN FUNDS STRUCTURE

SGLRI is a 100% subsidiary of SCOR SE. SGLRI own funds eligible to cover the SCR are USD 3,687 million at December 31, 2020.

SGLRI Own funds structure as at December 31, 2020

in USD thousands	Tier 1	Tier 2	Tier 3	Total
Basic own funds	3,687,007	-	-	3,687,007
Ordinary share capital	3,352	-	-	3,352
Share premium	110,632	-	-	110,632
Reconciliation reserve	3,491,843	-	-	3,491,843
Other items approved by supervisory authority	81,181	-	-	81,181
Total available own funds	3,687,007	-	-	3,687,007
Total eligible own funds to cover the SCR (after limit deductions)	3,687,007	-	-	3,687,007
Total eligible own funds to cover the MCR (after limit deductions)	3,687,007	-	-	3,687,007

SGLRI Own funds structure as at December 31, 2019

in USD thousands	Tier 1	Tier 2	Tier 3	Total
Basic own funds	4,003,860	-	-	4,003,860
Ordinary share capital	3,352	-	-	3,352
Share premium	110,632	-	-	110,632
Reconciliation reserve	3,808,695	-	-	3,808,695
Other items approved by supervisory authority	81,181	-	-	81,181
Total available own funds	4,003,860	-	-	4,003,860
Total eligible own funds to cover the SCR (after limit deductions)	4,003,860	-	-	4,003,860
Total eligible own funds to cover the MCR (after limit deductions)	4,003,860	-	-	4,003,860

SGLRI considers all its basic own funds, identified in line with Solvency II rules and resulting from economic adjustments made to the SGLRI's equity under IFRS, as available and eligible to cover the SCR.

Solvency II own funds are classified into three tiers depending on whether it is a basic or ancillary own funds item, and on whether it is permanently available to absorb losses on a going concern basis and/or is subordinated such that it is available to absorb losses in the event of a winding-up, and as described in the Articles 71, 73, 75 and 77 of the Delegated Acts.

The table above presents the components of basic own funds. SGLRI does not recognize any ancillary own funds.

Ordinary paid-in share capital and the related share premium of SGLRI are classified as tier 1 basic own funds. The components of the reconciliation reserve are also classified as tier 1 basic own funds.

The reconciliation reserve represents the reserves from the 2020 Financial Statements, net of any adjustments, and the economic valuation differences. The economic valuation differences result from adjustments made to the statutory financial statements balance sheet to arrive at the economic value of all assets and liabilities recognized in the Solvency II EBS.

The reconciliation reserve is classified as tier 1 basic own funds.

“Other items approved by supervisory authority” relate to a capital contribution which received approval from the Central Bank of Ireland as tier 1 own funds in 2015.

E.1.2 ELIGIBILITY OF OWN FUNDS

For the purposes of compliance with the SCR, tier 1 capital must account for at least half of the required capital (50% of the SCR), the sum of eligible tier 2 and tier 3 capital must account for a maximum of 50% of the SCR and the eligible amount of tier 3 capital must account for less than 15% of the SCR.

The application of the above limits determines SGLRI’s eligible own funds. As at December 31, 2020, none of these limits are exceeded by SGLRI.

E.1.3 RECONCILIATION WITH SHAREHOLDERS’ EQUITY

The table below presents the differences between the shareholders’ equity in the 2020 Financial Statements prepared under IFRS and the net assets over liabilities as calculated for solvency purposes and presented in the EBS.

SGLRI Reconciliation between statutory IFRS equity and EBS net assets in USD thousands

SGLRI in USD thousands	December 31, 2020
Statutory - IFRS Shareholders’ equity	1,706,450
Economic adjustments	1,980,557
Investments	1,784,954
Net technical balances	223,745
<i>Net technical balances, excluding risk margin – Life</i>	792,034
<i>Risk margin – Life</i>	(568,289)
Deferred taxes	(28,142)
Excess of assets over liabilities in the Solvency II EBS	3,687,007
Deductions for foreseeable dividends	-
Total available own funds	3,687,007

The economic adjustments represent revaluations necessary to remeasure all of SGLRI’s assets and liabilities calculated in accordance with IFRS as economic values under Solvency II rules. For further details on valuation principles and differences, please refer to Chapter D - Valuation for solvency purposes.

E.2 Solvency Capital Requirement and Minimum Capital Requirement

E.2.1 SOLVENCY CAPITAL REQUIREMENT

The solvency capital requirement (SCR) of SGLRI is calculated using its approved internal model, which is consistent with that of the SCOR Group. Therefore, the risk categories are the same as those described in the SFCR of the SCOR Group and SCOR SE, except in relation to P&C underwriting risks which are not relevant for SGLRI.

This section provides a breakdown of the SCR by risk category. This is followed by an overview of the internal model, including a description of the risk categories.

This section is linked to the Quantitative Reporting Template S.25.03 – SCR-IM in the Appendix A.

E.2.1.1 SCR BY RISK COMPONENT

SGLRI’s SCR is USD 1,915 million as at December 31, 2020 and has increased by 18% or USD 293 million over the year from USD 1,622 million as at December 31, 2019.

The table below shows the standalone 0.5% Value-at-Risk (VaR) for each risk category, and the diversification and tax components. The risk categories are described in section E.4.1 – Overview of the internal model.

SGLRI In USD thousands	0.5% VaR As at December 31, 2020	0.5% VaR As at December 31, 2019	Changes from 2019 to 2020
Life underwriting	2,164,101	1,904,007	260,094
Market	1,255,747	901,510	354,237
Credit	389,595	243,240	146,354
Operational	137,391	105,892	31,499
Required capital before diversification	3,946,833	3,154,649	792,184
Diversification	(1,591,134)	(1,142,706)	(448,428)
Loss absorbing capacity of deferred taxes	(440,578)	(389,609)	(50,970)
SCR	1,915,120	1,622,334	292,786

The standalone required capital, before diversification between risk categories and tax, has increased by USD 792 million compared to December 31, 2019. This is mainly due to the following:

- Life underwriting standalone risk has increased by USD 260 million compared to December 31, 2019. This is mainly due to adverse economic developments (notably the fall in interest rates in the US and UK) together with business volume growth; partially offset by favourable developments in expected profits.
- Market standalone risk includes invested assets, FX, interest rate, and credit spread risk. It has increased by USD 354 million compared to December 31, 2019. This increase is mainly due to model refinements, to better reflect different regimes such as the current longer-term low yield regime, business updates (including increases in the fixed income exposure) and a fall in interest rates (as noted above). The impact on the SCR after diversification is much less than the increase in standalone capital because market risk diversifies well with other risk categories.
- Credit standalone risk includes default risk and credit rating migration risk on assets. It has increased by USD 146 million compared to December 31, 2019. This is mainly due a reassessment of the Life counterparty risk in SLI, which is 74% owned by SGLRI and therefore also increases the SGLRI standalone credit risk capital on a look-through basis³. The impact on SGLRI's SCR is small after diversification because credit risk diversifies well with other risk categories.
- Operational standalone risk has increased by USD 31 million; mainly due to scenario refinements and data updates.

Diversification and the loss absorbency benefit of taxes decreases the SCR by an additional USD (499) million, compared to December 31, 2019.

E.2.2 MINIMUM CAPITAL REQUIREMENT

SGLRI In USD thousands	December 31, 2020	December 31, 2019	Variation	% Variation
MCR Minimum (25% of SCR)	478,780	405,584	73,197	18%
MCR Linear	536,091	467,814	68,277	15%
MCR Maximum (45% of SCR)	861,804	730,050	131,754	18%
MCR with Internal Model cap & floor	536,091	467,814	68,277	15%

The table above presents MCR calculations based on the internal model SCR.

The life linear Minimum Capital Requirement (MCR) is obtained by applying pre-defined factors to the net best estimate technical provisions classified by product type as well as to the capital at risk for all life exposures. The MCR is the result of this specified linear formula subject to a floor of 25% and a cap of 45% of the SCR calculated based on the internal model. For SGLRI, the MCR is equal to the linear MCR.

E.3 Use of the duration-based equity risk sub-module in the calculation of the Solvency Capital Requirement

³ A look-through basis is where risk exposures arising from SGLRI's participations are allocated to the underlying risk categories.

SGLRI does not use a duration-based equity risk sub-module in the calculation of the SCR.

E.4 Differences between the standard formula and any internal model used

The following sections describe SCOR's internal model and show how it is used within SGLRI.

E.4.1 OVERVIEW OF THE INTERNAL MODEL

SCOR developed its internal model to ensure that its solvency is properly measured: the model is part of a comprehensive solvency framework which seeks to ensure that SCOR, including SGLRI, is solvent now and will continue to be solvent in the future. It is deeply embedded in SCOR's Risk Management system and used extensively for strategic purposes and business steering. The model is materially complete in its coverage of risk and entities. For this purpose, material is defined as being at a level above which information could influence the decision-making or judgment of the intended users of that information.

Since 2003 SCOR, has used its experience and knowledge to develop an internal model which accurately reflects SCOR's risk profile as a global reinsurer. SCOR received approval from regulators to use its internal model for the calculation of its Solvency II SCR from the effective in-force date of Solvency II (January 1, 2016).

This section gives an overview of the internal model. Section E.4.2 gives examples of SCOR's use of the internal model. Section E.4.3 provides more detail on the operation of the internal model, describing how SCOR forecasts the probability distributions for its risks, section E.4.4 provides further information about the loss absorbing capacity of deferred taxes and section E.4.5 describes the key differences between the standard formula and SCOR's internal model.

Summary of the approach

The internal model produces a probability distribution of SCOR's economic balance sheet at a date one year in the future. It does this by calculating, for many thousands of scenarios, the value of the balance sheet items exposed to risk. SCOR leverages its experience to forecast a probability distribution for each of these risks and to determine how the different risks interact. SCOR then uses this to produce a single probability distribution of the change in economic value. See section E.4.3 for more details. The model allows for diversification and for the loss absorbing effect of deferred taxes.

Scope of the internal model

Business units

The internal model is a global model and operates under the same standards across the Group, within and outside the Solvency II regime. SCOR manages its business using a Group and business unit approach as described in section A.1.1.5 - Legal and organizational structure of the Group, under which the activities of the Life and P&C business units are represented alongside SCOR Global Investments.

The internal model covers the entirety of SCOR's worldwide (re)insurance activities. It therefore designed to include all known material quantifiable risks to which the Group is exposed. SCOR has robust processes in place to ensure the continued adequacy of the internal model to its risk profile.

The internal model is used to calculate the Solvency II SCR of the Group and the following Solvency II regulated entities: SCOR SE, SGLRI and SLI.

Risk measure and time period

The risk measure used to determine the Solvency Capital Requirement is the Value-at-Risk (VaR) of the change in basic own funds over a one-year period with a confidence level of 99.5% (i.e. VaR 0.5%).

Risk categories

SGLRI groups the risks modelled into four categories⁴: Life underwriting, market, credit and operational risks. The definitions of the risk categories are as follows:

- **Life underwriting** risk is the risk of change in the value of life and health liabilities. It also includes related risks such as those associated with deposits to cedents, reinsurance recoverables and reinsurance payables, and interest income on funds withheld. Underwriting risk covers risks from business written to date and business planned to be written over the next year.
- **Market** risk is the risk of loss to balance sheet items (for instance provisions, payables, investments and debt) from changes in the level of market prices.
- **Credit** risk is the risk resulting from the default or changes in the rating of insurance or investment counterparties.

⁴ The SCOR Group also models P&C underwriting risk but SGLRI has no exposure to this risk.

- **Operational** risk is the risk of loss from inadequate or failed internal processes, personnel or systems or from external events. Operational risk includes legal risks, and excludes risks arising from strategic decisions and reputational risks.

The risk categories are reported before tax and diversification. These are then shown separately:

- **Diversification.** This is the impact of determining the joint capital requirements of the four risk categories. The aggregated capital requirement is less than the sum of the individual capital requirements because of SGLRI's diversified portfolio which significantly reduces the likelihood of simultaneous occurrence of adverse experience and because losses in one area are offset by gains in another.
- **Loss absorbing capacity of deferred taxes.** For each modelled scenario, the internal model calculates the tax impact of the change in economic value. In unprofitable scenarios, like the 1-in-200 loss scenario associated with the SCR, it captures the loss absorbing capacity of deferred taxes by modelling the change in value of the deferred tax positions which reduces the impact of the loss on the basic own funds. See section E.4.4 – Loss absorbing capacity of deferred taxes for more details.

Data used in the internal model

The probability distribution forecast of SGLRI's economic balance sheet requires forecasts to be made for the economic background, for each risk factor, and for the dependencies between the various risk factors. These forecasts rely on actuarial, economic, financial and business portfolio assumptions and data. Because the accuracy and appropriateness of this data are important, SGLRI carefully manages data to ensure its proper and structured storage, reliability, and accessibility. SGLRI applies a data quality management framework to identify key data affecting internal model results, in particular the SCR, and data quality criteria to all of this data. Section E.4.3 describes in more detail the data used for each risk category and how SGLRI ensures that the data is appropriate.

In some areas, there is little data available, the data lacks reliability, or its relationship to the forecast being made is only indirect. In these cases, SGLRI applies expert judgement within a framework to make sure that its application is proportionate to the quantity and quality of data available, and to its potential impact on the SCR.

E.4.2 USES OF THE INTERNAL MODEL

The internal model is used to support the Group's business initiatives and to provide input for management decisions. See for example sections B.3.1.3 – Risk tolerances, B.3.2.3 – Identification and assessment of risks and C.2.2 – Risks related to technical provisions. Other examples are as follows:

- SCOR uses the internal model to determine solvency and profitability and for economic and solvency capital assessment. The internal model is used to produce distributions of scenarios for changes in basic own funds over the coming year for SCOR Group and material Group entities, in accordance with Solvency II principles.
- SCOR uses the internal model for strategic solvency management. The internal model is the core tool for setting and maintaining SCOR's strategic solvency target to align shareholder returns, business growth, profitability and solvency protection for clients.
- The internal model plays an important role in SCOR's System of Governance, and Risk Management System and helps to optimize shareholder return. SCOR designed and developed the model specifically for its own risks, so the internal model provides a better understanding of its risk profile than an industry-standard or standard formula approach.
- SCOR's Capital Shield strategy, uses a range of protection mechanisms to ensure that the retained risk profile remains in line with the risk appetite framework and risk tolerances.
- SCOR's SCR is mainly driven by its underwriting risks, with high diversification through well-balanced Life and P&C portfolios. Full distribution modelling and capital allocation steer SCOR's risk return profile to the optimum allocation of economic capital to business units and lines of business, and to new business. Thus, the pricing of new business with an understanding of the resulting capital allocation assists SCOR in targeting business which is expected to provide an attractive return on capital.
- SCOR uses the internal model for risk analysis to support acquisitions and other major decisions and to assess the impact on the Group's (and relevant entity's) solvency.

E.4.3 PROBABILITY DISTRIBUTION FORECASTS

This section describes how SCOR forecasts the probability distribution for each risk category. The approach can be summarized as follows:

- SCOR determines the exposure of the economic balance sheet items exposed to risk using the economic characteristics of its portfolio.
- SCOR analyses each risk category into a number of risk factors and generates probability distributions for each of these risk factors, using its own experience and expertise applied to internal, external and market data.

- SCOR uses Monte-Carlo simulation techniques to produce the full probability distribution forecast for each risk category.

Life Underwriting Risk

To model its life and health risks SCOR combines global expertise and significant amounts of experience, including data from acquisitions. It uses this to derive the statistical characteristics of these risks, particularly their current probability distributions, the nature of the dependencies between them and their expected behavior over the next year.

Probability distribution functions are chosen to model the underlying risk factors such as mortality, longevity and policyholder behavior. SCOR applies expert judgment and scenario analyses where experience data are relatively scarce, for example lapse and morbidity risks.

The internal model takes future management actions into account, reflecting the optionality available to SCOR on certain blocks of business in the event of adverse mortality or critical illness experience.

Market Risk

The market risk category comprises a number of risk factors, including interest rates, credit spreads, inflation and currency exchange rates (FX).

SCOR applies probability distributions for these risk factors to the values of economic balance sheet items. Within this risk category, SCOR also applies probability distributions for interest rates to the modelled values of discounted best estimate liabilities and deposits to cedents.

SCOR forecasts the probability distributions of the risk factors, and the dependencies between them, using economic scenarios for a number of major currencies. These economic scenarios are created by SCOR's Economic Scenario Generator (ESG), which produces scenarios representing various plausible states of the economy specified in terms of economic risk factors, to determine how the economic balance sheet would react under these various scenarios.

The internal model determines, for each ESG scenario, the impact on the underlying economic balance sheet item. Repeating this exercise many times for different future economic scenarios gives the full probability distribution forecast for market risk.

Credit Risk

The probability distribution forecast for credit risk includes migration and default risk, and is determined in three stages. Firstly, using historical data, the risks of counterparty rating migration (including default) are forecasted. Secondly, the impact of the rating migration or default is determined from the exposure to the counterparty. Finally, this exercise is repeated many times for different future economic scenarios to arrive at the probability distribution forecast for credit risk.

Operational Risk

SCOR models annual losses at the entity level and by key operational areas. There are two main data sources for modelling operational risk: scenario analyses from experts and historical losses. The methodology for modelling losses for each operational risk area is based on a Bayesian approach. This allows for the combination of several input data sources for each modelled operational risk area to obtain credible data.

Other

Minor balance sheet items, such as intangible assets or debt, are assumed to carry a low intrinsic risk. These are modelled in a simplified way and included in the relevant risk category.

E.4.4 LOSS ABSORBING CAPACITY OF DEFERRED TAXES

The modeled economic balance sheet includes deferred tax assets and deferred tax liabilities recognized at valuation date. For each modeled scenario, the internal model calculates the tax impact of the change in economic value (i.e. economic profit or loss).

In unprofitable scenarios, like the 1-in-200 scenario associated with the SCR, it captures the loss absorbing capacity of deferred taxes by modeling the change in value of the deferred tax positions which reduces the impact of the loss on the modelled basic own funds. The internal model determines this item by modeled entity and by scenario. The Group tax effects represent the aggregated tax effects of the modeled entities. A recoverability test is performed based on an estimated evolution of profits in future years to verify that they are sufficient to support the amount of deferred tax assets. This is calculated based on assumptions about the future profitability, which includes a prudent allowance for the increasing uncertainty over time. The tax model parameters are calibrated on the basis of expert judgment provided by experts from the Finance, Tax and Risk Management functions. At 31 December 2020, the loss-absorbing capacity of deferred taxes reduces the SCR by USD (441) million (or (19)% of the SCR before tax), which is expected to be recoverable based on the projected future profits.

E.4.5 KEY DIFFERENCES BETWEEN THE STANDARD FORMULA AND THE INTERNAL MODEL

SGLRI uses its approved internal model to calculate its SII SCR (see section E.4.1), as opposed to the Solvency II standard formula. SCOR designed and developed the internal model specifically for its own risks, so it provides a better understanding of its risk profile than an industry-standard or standard formula approach.

SCOR's internal model is similar to the standard formula in that both use a risk category approach, apply diversification between the risk categories, and calculate the SCR at a 99.5% VaR. However, in contrast to the simplified factor approach of the standard formula, the full distribution is modelled in the internal model (including stochastically modelling tax).

SCOR's internal model structure reflects geographical market specificity by use of appropriate risk factor calibration. The standard formula uses generic diversification factors for all (re)insurers, whereas the SCOR internal model reflects the benefits of risk diversification specific to a global reinsurer as compared to a less diversified local insurance undertaking.

Additional key differences are summarized below by risk category:

- For Life underwriting, a wider range of risk factors than considered in the standard formula is modelled. Also, for Life underwriting, the standard formula only covers risks from business in force, whereas the SCOR internal model also includes risks from future business expected to be written over the next year according to the business plan.
- For Market risk, SCOR uses its own ESG which reflects dependencies over the full range of outcomes (not just those at the 99.5th percentile) between the different components of market risk.
- For Credit risk, SCOR models migration and default risk comprehensively for marketable securities and covers default of future profits from cedents. Migration risk reflects a potential loss in the book value of assets due to changes in the credit quality of counterparties, despite no actual default.
- For Operational risk, SCOR adopts a granular approach, which reflects actual historical operational loss data from key operating areas.

E.5 Non-compliance with the Minimum Capital Requirement and non-compliance with the Solvency Capital Requirement

SGLRI has complied with the Solvency II MCR and the SCR requirements at all times during the reporting period covered by this report.

E.6 Any other information

SGLRI has no other material information, in addition to that already contained in other sections, to report about its capital management.
